Compute Project

OCP U.S. SUMMIT 2017

Santa Clara, CA

OCP Trial Results for Telco Infrastructure

Jungsoo Kim/Manager/SKTelecom

OPEN HARDWARE.

OPEN SOFTWARE.

OPEN FUTURE.

Agenda

SKT Infrastructure

- Infrastructure Evolution
- COSMOS
- Open Hardware & Software in SK Telecom

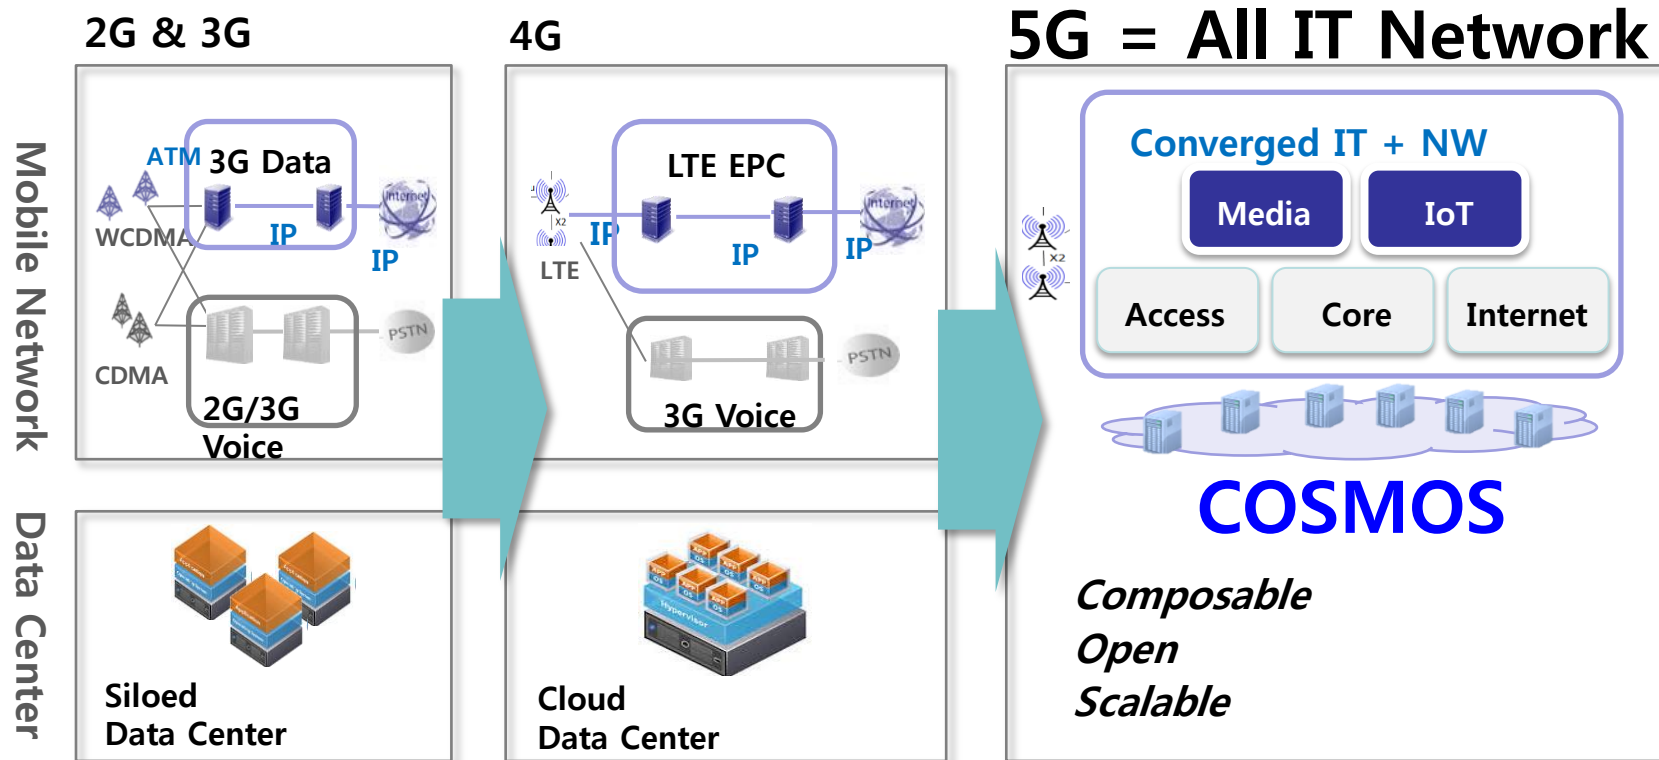

OCP Trial Results

- The Purpose of OCP Trial
- Characteristic Differences
- Trial Scope and Details
- Testbed Design
- Power Consumption Comparison
- Deployment Issues

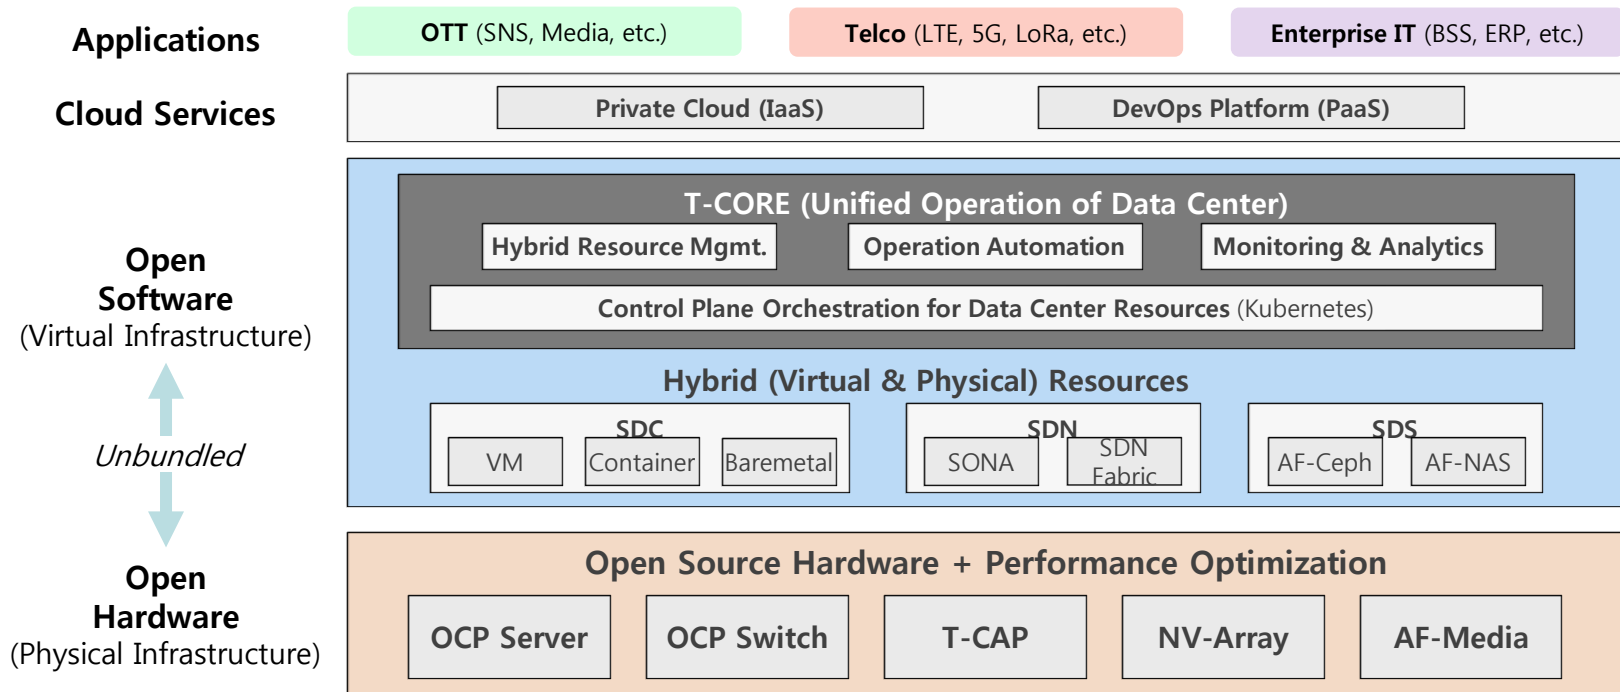

Our Approach

Next Step

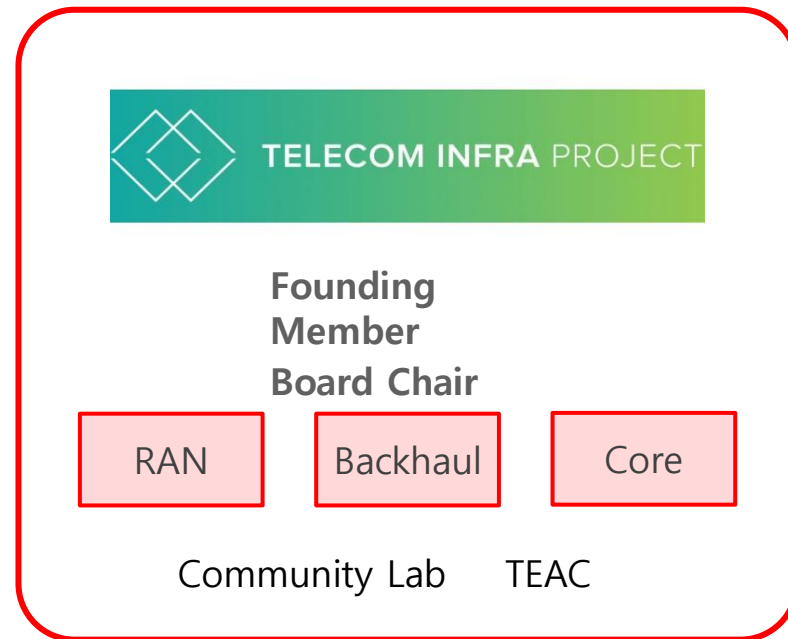

Infrastructure Evolution

- Composable, Open, Scalable, Mission-critical Optimized System

Open Hardware/Software in SK Telecom

The Purpose of OCP Trial

Benefits of Open Compute at Facebook

Compared to traditional servers.....

38% Increase in Power Efficiency

24% Reduction in Costs

**Innovative
Power Distribution**

21 inch wide

Open U

- ✓ **Verify OCP Technology**
 - Efficiency, Performance, Serviceability
- ✓ **Analysis Deployment Environment**
 - Procurement, IDC Environment, Specification ...
- ✓ **Check OCP Ecosystem in Local**
 - Vendor, Tech Support, Delivery ...

Characteristic Differences

- Understanding of environmental difference is important key to success

	Hyper-Scale	SK Telecom
Volume	> Hundreds of Thousands	< Tens of Thousands
Age of Datacenter	Young	Old
Datacenter	A Few Big IDCs	Small Distributed IDCs
Infra Management	Centralized	Separated
Deployment	Rack Scale	System Scale
Major Supplier	ODM Vendor	Brand Vendor

Trial System Configuration

- Selected three rack configurations to test various kinds of application

OpenStack Rack

Trial Scope

- From the selection of vendor to operation environment, we wanted to check practical issues of whole lifecycle of OCP elements in local environment

Vendor Selection

- Four Vendors responded to RFP
 - ✓ One vendor had Korea office, two vendors had a local partner, one vendor hadn't entered local market yet
- Assessed each vendor based on Credibility, Technology, Price, Tech Support and Delivery Time
- Based on the checklist, two vendors were selected as a OCP trial supplier
- Issues: Long delivery time (BTO based process), Wide price variations, Unskilled Technical Support

Vendor A

Vendor B

Vendor C

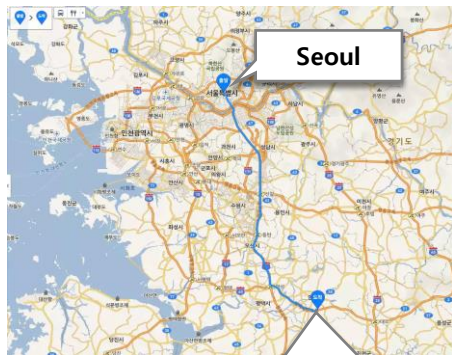

Vendor D

CRAC Testbed

- Rented CRAC Testbed for environmental & performance test
- Temp/Humidity Control, 20 Racks with Cold-Aisle Containment, Server Simulator, Sensors and loggers etc.

Test Details

Category	Item	Details			
Performance (Testbed)	CPU	Purpose	To compare CPU performance of each compute node		
		Summary	Measurement	Unit	Tool
			POPS (Prime Operations Per Second)	POPS	Sysbench
	Memory	Purpose	To compare memory performance of each compute node		
		Summary	Measurement	Unit	Tool
			Throughput	MB/s	STREAM
Efficiency (Testbed)	Power Consumption	Purpose	Power consumption comparison between legacy and OCP server under different room temperature(25C~35C) and workloads (Idle~100%)		
		Summary	Measurement	Unit	Tool
			Inlet/Outlet Temp, Power Consumption	Watt, degree C	Stress
Application (Datacenter)	OpenStack / Hadoop / NFV Container	Purpose	To compare application environment between OCP and legacy system		
		Summary	Measurement	Unit	Tool
			Feedbacks from operation and development	N/A	Various

Performance

- No significant difference was found between OCP and legacy system
- Can check configuration differences or problems among systems before measuring power usage

➤ Test Tools

Category	Unit	Tool
CPU	▪ POPS (Prime Operations Per Second)	▪ sysbench
Memory	▪ MB/s	▪ STREAM

CPU Performance

Memory Bandwidth

Power Consumption Comparison

- Compared power consumption of OCP and Legacy system under different room temperature and workload
- As the inlet temperature rises, the efficiency also rises

Power Consumption
(W/Server)

Workload 20%

Power Consumption
(W/Server)

Workload 50%

Power Consumption Comparison

- In idle state, OCP server bettered legacy server under all the room temperatures
- In extreme workload, power consumption difference drops slightly

Power Consumption
(W/Node)

Workload 0%

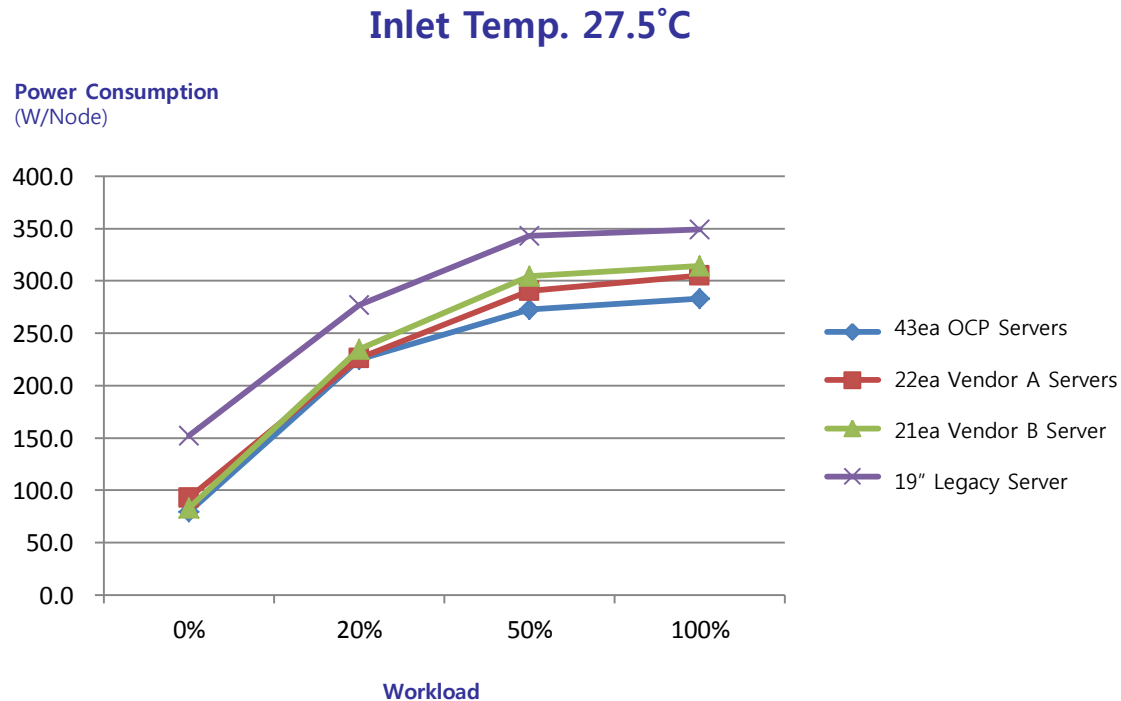

Power Consumption
(W/Node)

Workload 100%

Power Consumption Comparison

- From idle to full workload, OCP server bettered 19-inch legacy server
- Most power efficiency can be gained through full rack configuration (43 servers)
- Vendor differences in power consumption exists (may need firmware optimization)

Power Efficiency Summary

- On general workload, OCP system is about 20% more power efficient than 19-inch legacy system
- As the room temperature rises, the efficiency of OCP system also rises
- Vendor difference exist in power consumption (about 3%~5%)
 - ✓ Fan & Power Curve tuning may need to optimize
- Should deploy full-rack configuration, to gain most energy efficiency
 - ✓ With full-rack configuration (43 Servers), OCP server saved about 20% compare to 19-inch server
 - ✓ With half-rack configuration (21 Server), the power efficiency decreases by 10%~40%

Fully Packed (43 Servers)

Utilization	Legacy	OCP	Power Saving (OCP/Legacy)
0%	152.5W	79.3W	48%
20%	276.9W	225.0W	19%
50%	343.1W	272.5W	21%
100%	348.9W	282.9W	19%

Half Packed (21 Server)

OCP	Power Saving (OCP/Legacy)
88.0W	42%
230.6W	17%
297.4W	13%
309.7W	11%

※ Inlet Temp: 27.5°C

Datacenter Deployment

- Moved OCP gear from Testbed to IDC to test service applications
- Among the three candidates, the oldest datacenter were excluded because of rack size problem

	Datacenter A (Excluded)	Datacenter B (OpenStack/R&D)	Datacenter C (Hadoop)
Description	<ul style="list-style-type: none">• The oldest building built as a central office in early 90's• Reconstructed office building to a server room• Small freight elevator• Height of server room entrance is lower than Open Rack	<ul style="list-style-type: none">• Colocation center• The newest building• Height of server room entrance is lower than rack	<ul style="list-style-type: none">• Constructed as a central office in mid 90's• Height of server room entrance is lower than Open Rack
Rack Power	<ul style="list-style-type: none">• 220V Single Phase (6.6kw)	<ul style="list-style-type: none">• Provides various rack power options (220V/380V, 6.6/13.2kw etc.)	<ul style="list-style-type: none">• 220V Single Phase (6.6kw)
Operation Temp.	~25°C	~25°C	~25°C

Deployment Issues

- Removed network tray

- Disassemble containment

- Negative pressure

- Server room entrance

- Small freight elevator

- Incompatible rack shelf

Trial Summary

Trial Summary

- Limited vendors & models
- Unexperienced tech support
- Long communication time

- Size matters - tall rack height
- Low Rack Input Power (6.6kw)
- Compatibility issues

- Unified monitoring system needed

- No performance difference
- Confirmed efficiency

Open Source Hardware Ecosystem Growth

- Relatively long delivery
- High deviation of purchasing price

Organization Consensus

- No serious problems are reported
- VGA port may need

Standardization

Next Step - Hardware Management System

Due to the proliferation of new platforms, like AI and Container clusters, the management of hardware information becomes important

【 AS-IS 】

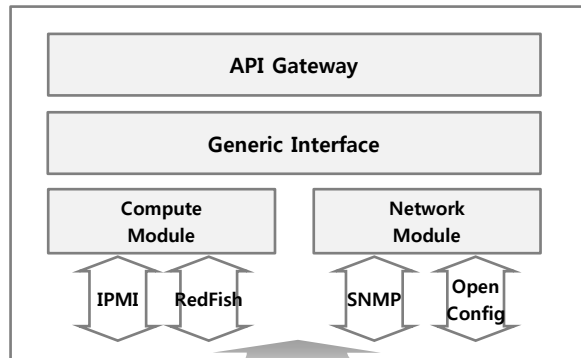

Collection Data	<ul style="list-style-type: none"> • OS Level Data Collect <ul style="list-style-type: none"> - hostname - serial number - OS version - CPU info - VM info
Path	<ul style="list-style-type: none"> • In-Band
Method	<ul style="list-style-type: none"> • Agent
Change Mgmt.	<ul style="list-style-type: none"> • Manual

【 HW Mgmt. System 】

<ul style="list-style-type: none"> • HW Level Data Collect <ul style="list-style-type: none"> - Chassis/Board info - BMC info - Temperature - Power - Fan
<ul style="list-style-type: none"> • In-Band & Out-Of-Band
<ul style="list-style-type: none"> • IPMI/RedFish/SNMP
<ul style="list-style-type: none"> • Manual + Automatic

Next Step - Hardware Management System

- Provides standard API
- Supports various protocols (IPMI, RedFish, SNMP ...) and provides HW abstraction layer

Call for Collaboration

- ✓ To define standard API
- ✓ To develop hardware abstraction layer
- ✓ To reflect telco requirements

Interested Parties

OCP HW Management Project,
DMTF (RedFish), HW/Chip Vendors
