2 Overview

2.1 License

As of April 7, 2011, the following persons or entities have made this Specification available under the Open Web Foundation Final Specification Agreement (OWFa 1.0), which is available at http://www.openwebfoundation.org/legal/the-owf-1-0-agreements/owfa-1-0:

Facebook, Inc.

You can review the signed copies of the Open Web Foundation Agreement Version 1.0 for this Specification at http://opencompute.org/licensing/, which may also include additional parties to those listed above.

Your use of this Specification may be subject to other third party rights. THIS SPECIFICATION IS PROVIDED "AS IS." The contributors expressly disclaim any warranties (express, implied, or otherwise), including implied warranties of merchantability, non-infringement, fitness for a particular purpose, or title, related to the Specification. The entire risk as to implementing or otherwise using the Specification is assumed by the Specification implementer and user. IN NO EVENT WILL ANY PARTY BE LIABLE TO ANY OTHER PARTY FOR LOST PROFITS OR ANY FORM OF INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OF ANY CHARACTER FROM ANY CAUSES OF ACTION OF ANY KIND WITH RESPECT TO THIS SPECIFICATION OR ITS GOVERNING AGREEMENT, WHETHER BASED ON BREACH OF CONTRACT, TORT (INCLUDING NEGLIGENCE), OR OTHERWISE, AND WHETHER OR NOT THE OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

3 Card Features

- ConnectX®-4 EN based
- Single port: 1x 100GbE port (QSFP28)
- PCI-e x16 Gen 3.0
- NC-SI
- Power rail supply of 12VAUX and 3.3VAUX
- 16MB Flash
- 16MB EEPROM

3.1 Form Factor

The following figures illustrate the card's form factor and dimensions (in mm). Refer to the 2D DXF and 3D files for dimensions, tolerance, and height restrictions.

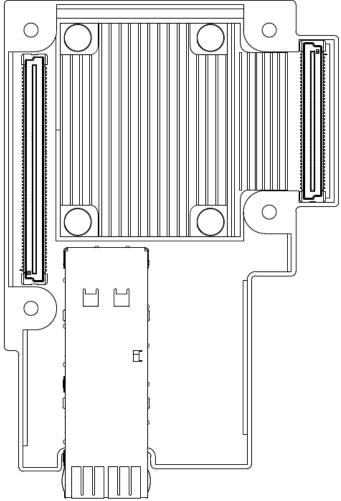

Figure 1: Form Factor (Top)

4 March 1, 2016

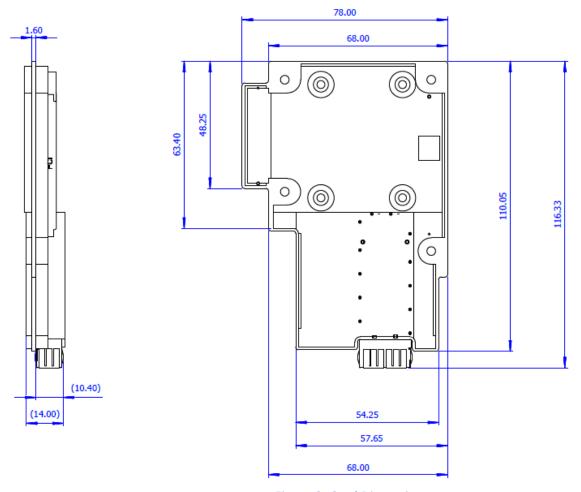

Figure 2: Card Dimensions

3.2 Major Components

- QSFP28
- Heat sink
- LEDs for link indication
- DC-2-DC converters
- 2 FCI connectors to the baseboard
- 156Mhz Oscillator
- QSFP power isolation
- CPLD for GPIOs expansion

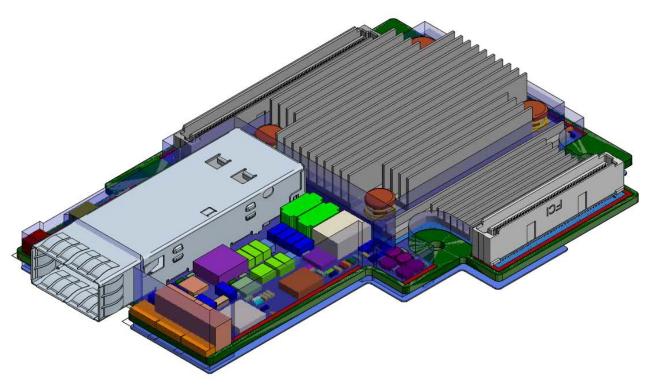

Figure 3: Top View

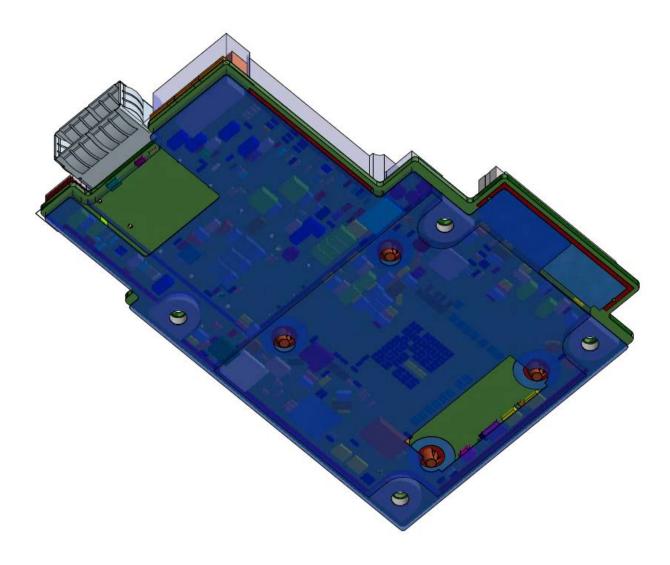

Figure 4: Bottom View

3.3 Connector

Two FCI B2B connectors, connector A and connector B, are mounted on the mezzanine card to mate with connectors mounted on the motherboard. Connector A (FCI/61083-124402LF) is a 120 pin connector and provides x8 PCI-e lanes. Connector B (FCI/61083-084402LF) is an 80 pin connector and provides x8 PCI-e lanes.

3.4 Pin Definition

The mezzanine card pinout definitions of Connector A and Connector B are as follows. The directions of the signals are from the perspective of the motherboard.

Table 1: Connector A Pinout Definition

Pin	Signal	Description	Pin	Signal	Description
A1	MEZZ_PRSN TA1_N/BASE BOARD_A_I D	Present pin1, short to pin120 on Mezz card	A61	P12V_AUX/P12V	AuxPower
A2	P5V_AUX	Aux Power	A62	P12V_AUX/P12V	AuxPower

3.5 Power Capability and Status on Connector

Baseboard supplies power to power pins on Mezzanine card connectors. The current capability and power status is provided in Table 3: Power Pins for Connector A. Normal power is available on state S0 only. Auxiliary power is available at all power states including hibernate state S4 or off state S5.

Note: 100GbE is fed from 12VAUX and 3.3VAUX power rails only.

Table 3: Power Pins for Connector A and B

Power Rail	Voltage Tolerance	# Pins	Current Capability	Status
P12V_AUX/P 12V	±8%(max)	3	2.4A	Normal power or auxiliary power
P5V_AUX	±9%(max)	3	2.4A	Auxiliary power
P3V3_AUX	±5%(max)	2	1.6A	Auxiliary power
P3V3	±5%(max)	8	6.4A	Normal power

3.6 Installation in Chassis

3D View of the mezzanine card installed in an Open Compute chassis.

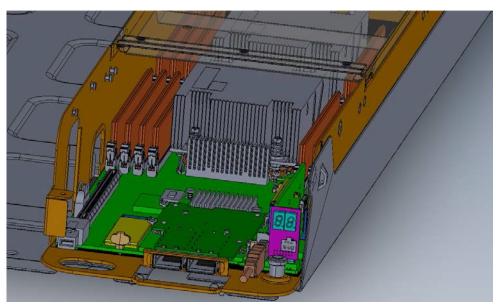

Figure 5: 3D View of Mezzanine Card Installed in OCP Chassis - Example

4 Interfaces

4.1 Ethernet Interface

The network ports of the ConnectX®-4 EN adapter card are compliant with the IEEE 802.3 Ethernet standards. Ethernet traffic is transmitted through the cards' QSFP28 connectors.

4.2 PCI Express Interface

The ConnectX®-4 EN network interface cards support PCI Express 3.0 (1.1 and 2.0 compatible). The device can be either a master initiating the PCI Express bus operations or a slave responding to PCI bus operations. The following lists the PCIe interface features:

- PCIe Gen 3.0, compatible with 2.0 and 1.1
- 2.5GT/s, 5.0 GT/s, or 8.0GT/s link rate x16
- Auto-negotiates to x16, x8, x4, or x1

4.3 LED Interface

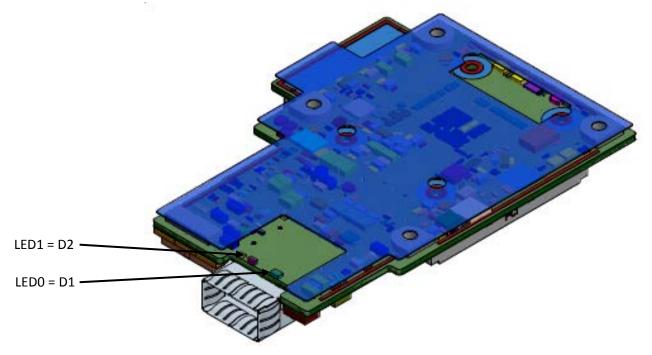

Figure 6: Mezzanine Card LED Location

There are two I/O LED per port to indicate link status and speed. See Table 4: Physical and Logical Link Indications.

Table 4: Physical and Logical Link Indications

LED	Function	LED Signals
LED0 - Physical link speed	 A constant Green indicates physical link with the highest rated speed. A constant Yellow indicates physical link with degraded speed. If LEDO is off, then the physical link has not been established. 	Port 0: LED0=D1, LED1=D2
LED1 - Logical link/activity	 A constant Green indicates a valid logical (data activity) link without data transfer. A blinking Green indicates a valid logical link with data transfer. If LED1 is off, then the logical link has not been established. 	

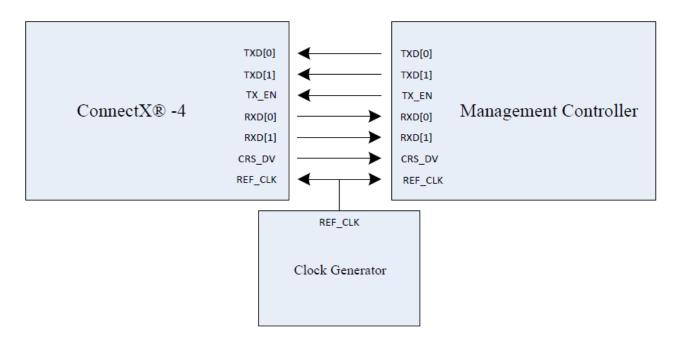

4.4 Management Interfaces

4.4.1 Network Controller Sideband Interface (NC-SI)

The adapter supports a slave Network Controller Sideband Interface (NC-SI) that can be connected to a BMC. The adapter's NC-SI implementation supports all mandatory NC-SI commands specified in the *Network Controller Sideband Interface (NC-SI) Specification, Rev. 1.1.0.*

The traffic between the BMC and the network goes through a dedicated data-path, and is agnostic to the host operating state. Additionally, through special configuration, local communication between the BMC and the host can be enabled/disabled. When local-loopback is enabled, additional configuration defines if the traffic between the local host and the BMC is visible on the network port or not.

5 Specifications

6.1 Single Port Card Specifications

Table 5: Single Port Card Specifications Table

Protocol Support Ethernet: 100GBASE-CR4, 100GBASE-KR4, 100GBASE-SR4, 50GBASE-R2, 50GBASE-R4, 40GBASE-CR4, 40GBASE-KR4, 40GBASESR4, 40GBASE-LR4, 40GBASE-ER4, 40GBASE-R2, 25GBASE-R, 20GBASEKR2, 1000BASE-CX, 1000BASE-KX, 10GBASE-SR, 10GBASE-LR, 10GBASE-ER, 10GBASE-CX4, 10GBASE-KX4, 10GBASE-CX, 10GBASEKR, SGMII		
	PCI Express Gen-3: SERDES @ 8.0GT/s, 16 lanes (2.0 and 1.1 compatible)	
	Voltage: 12VAUX, 3.3VAUX Typical Power¹: Passive Cables: 13.84W	
Power and Environmental	Maximum Power: Passive Cables: 15.68W Active Cables: 19.53W Maximum power available through QSFP28 port: 3.5W	
Environmentai	Temperature: Operational: 0°C to 35°C Non-operational: -40°C to 70°C Humidity: 90% relative humidity ²	
	Air Flow ³ : 250LFM	

¹ Typical power for ATIS traffic load.

² For both operational and non-operational states

³ NIC simulated in Ducted channel 74x15 mm2.

5.1 MAC Address Label Requirements

6.1.1 Placement Rules

MAC address label(s) must be scannable when Mezzanine card is installed in server, rack, etc. by system vendor, rack integrator, and DC user without interrupt of normal operation.

For 2x MAC addresses, 2x 2D bar codes and 2x human readable texts for MAC address need to be placed within 10mm from Mezzanine card PCB edge as shown in Figure 7.

For 3x MAC addresses, 3x 2D bar codes and 3x human readable texts for MAC address need to be placed within 18mm from Mezzanine card PCB edge.

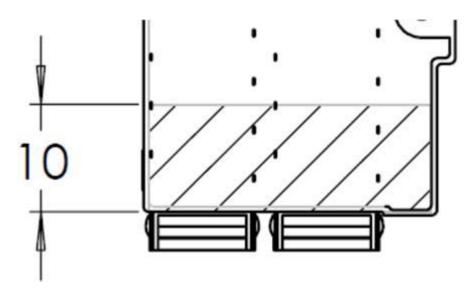

Figure 7: Mac Address Label Placement

The scanned bar code should not include ".".

Example: "AA.BB.CC.00.11.20" should scan as "AABBCC001120". Implementation example is shown in Figure 8.

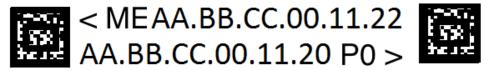

Figure 8: MAC Address Label Implementation Example

6.1.2 Barcode Requirements

6.1.3 Label Permanence and Technology

The MAC address label must adhere for at least 3-4 years in Open Compute usage and thermal environment. Materials can be PCB silkscreen, polyester, and polyamide with acrylic adhesive.

6.1.4 Label Size

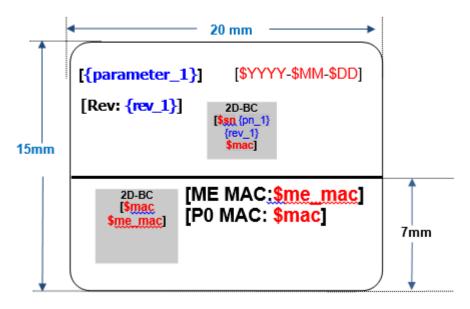

Figure 9: Board Label Size

7 Environmental

7.1 Environmental Requirements

This Mezzanine card shall meet the same requirements specified in the OCP systems that the Mezzanine cards is installed in. The OCP system that uses OCP Mezzanine card shall define air flow direction, inlet air temperature, air flow (or speed) to the local area where Mezzanine card is at, and simulation boundary.

Please refer to Section 6: Specifications for Airflow direction, inlet air temperature and air flow (or speed) to the local area where Mezzanine card is at.

7.2 Regulation

This mezzanine card meets KCC, CE, CTUV-US, RCM, ROHS, CB and FCC class A.

8 Revision History

Rev 1.0 – March 2016
