

Changing the network industry

Networking project readout

Omar Baldonado & Carlos Cardenas
OCP Networking Project Leads

OCP Networking Project

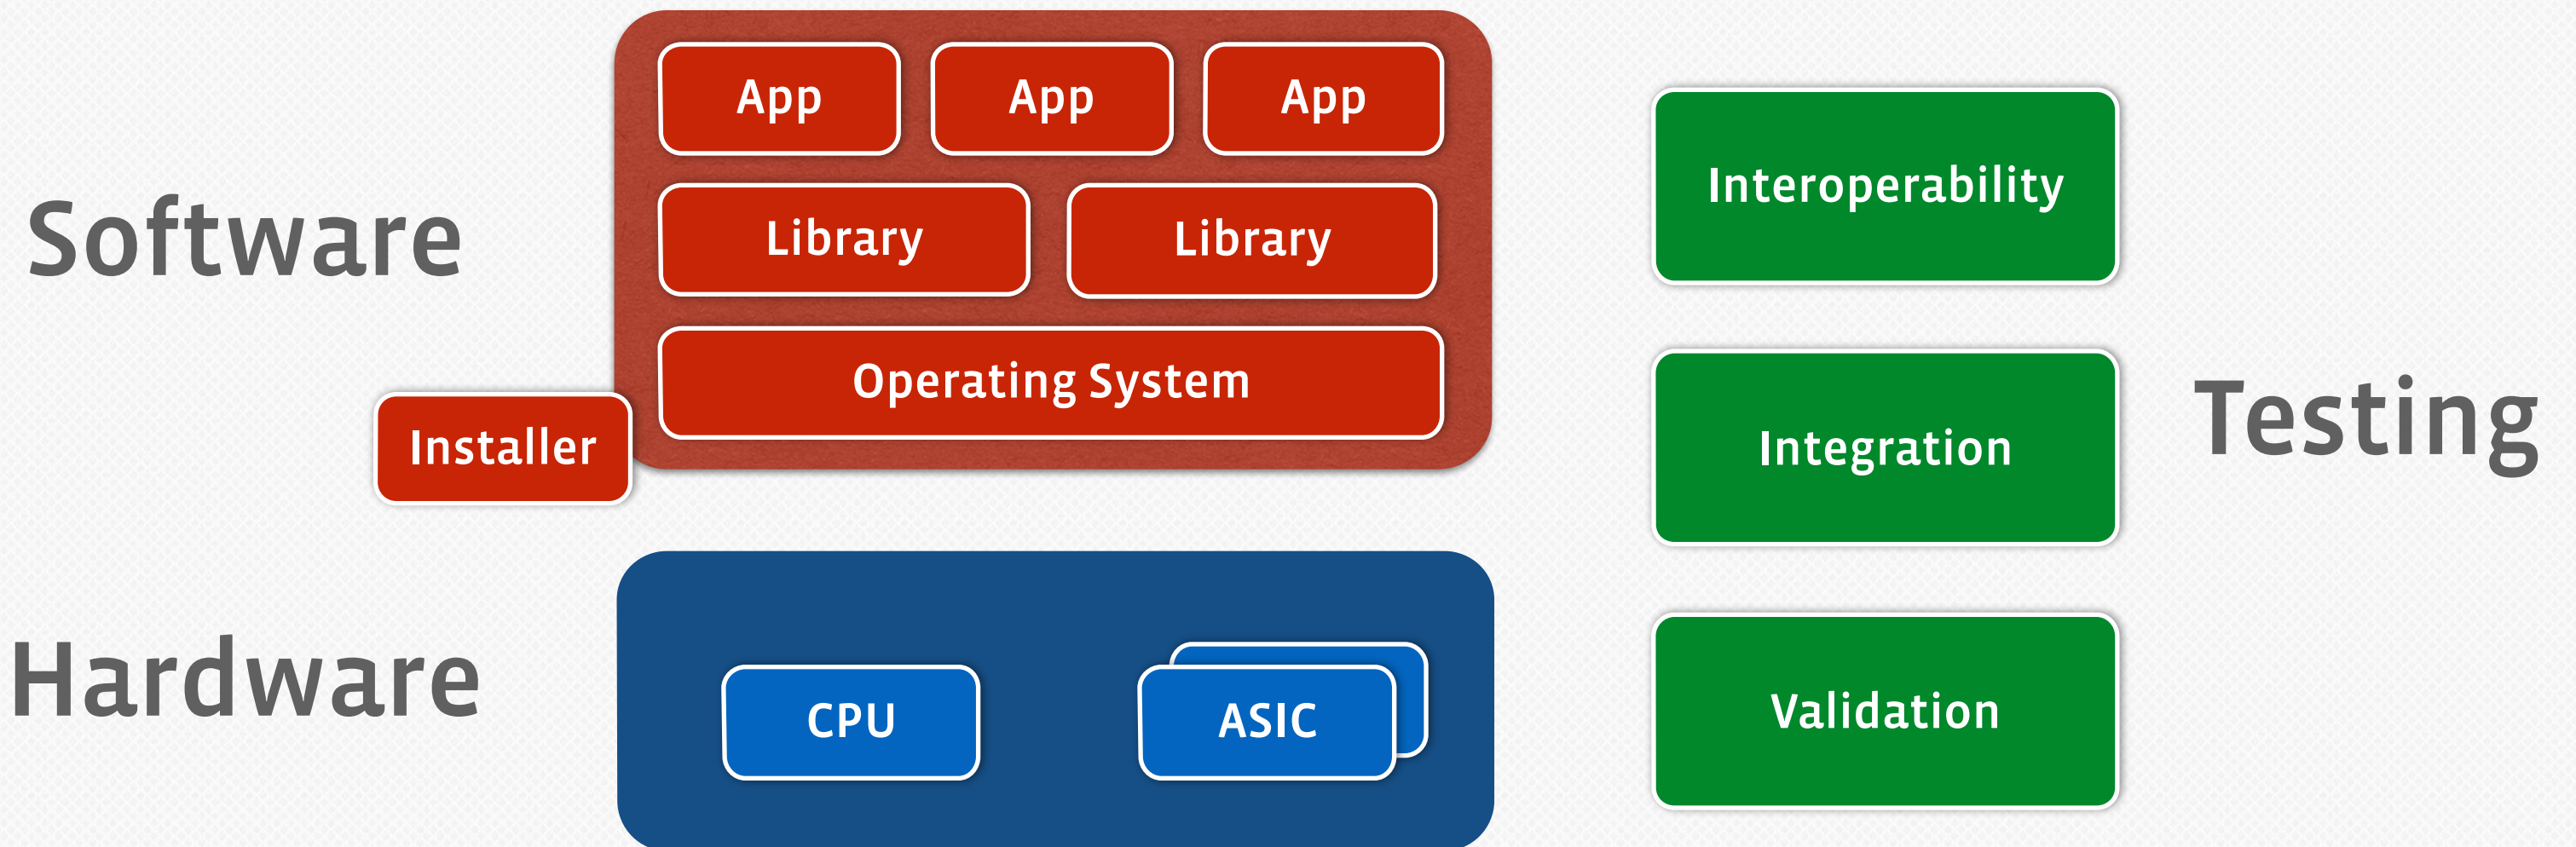

*“...create a set of networking technologies that are
disaggregated and **fully open**,
allowing for rapid innovation in the network space...”*

founding charter, May 2013

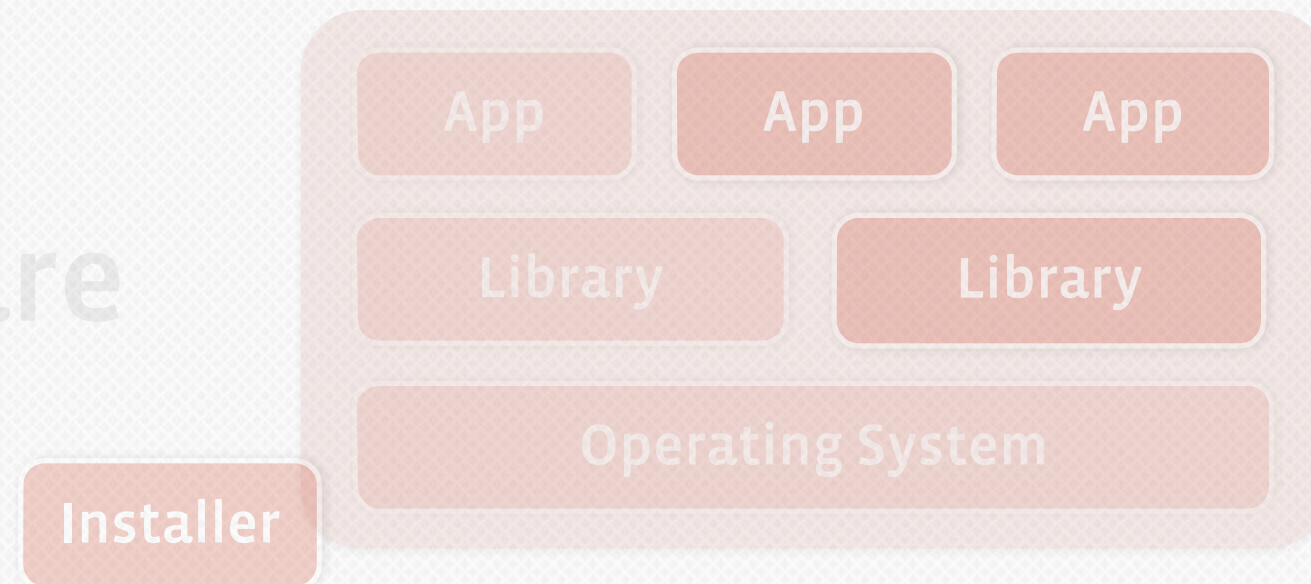

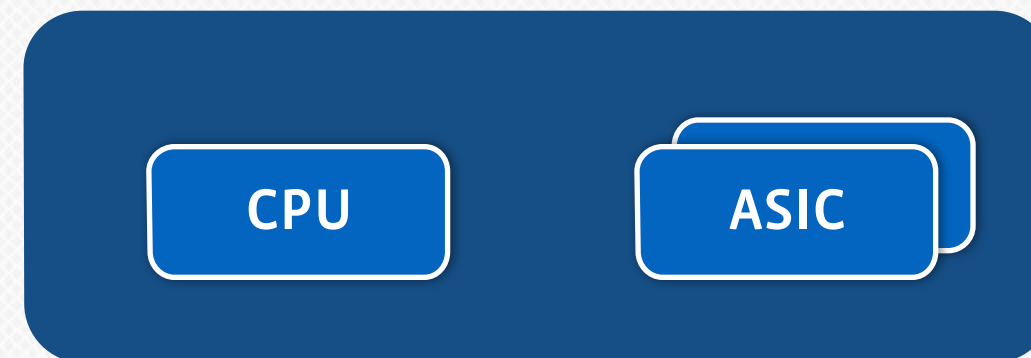

Network disaggregation is here!

Software

Hardware

Interoperability

Integration

Validation

Testing

Open networking hardware is reality!

First OCP networking switch accepted in 4Q2014

- Accton TOR switch - 48 x 10G + 6 x 40G
 - Full design package - an industry first
- Accton Open Rack Switch Adapter
 - Allows 19" switch in 21" Open Rack

Accton

More nearing the finish line

	<ul style="list-style-type: none">■ 48 x 10G switch and 32 x 40G switch (w/ Juniper)■ Reviewed w/ OCP IC, design pkgs submitted
	<ul style="list-style-type: none">■ Leaf/Spine switch - in final review/licensing
	<ul style="list-style-type: none">■ MSX 1400 OCP - initial review

More spec contributions...

Accton

New
Contribution

- 32 x 40G switch and a **32 x 100G** switch

1.5M simultaneous Netflix movies!

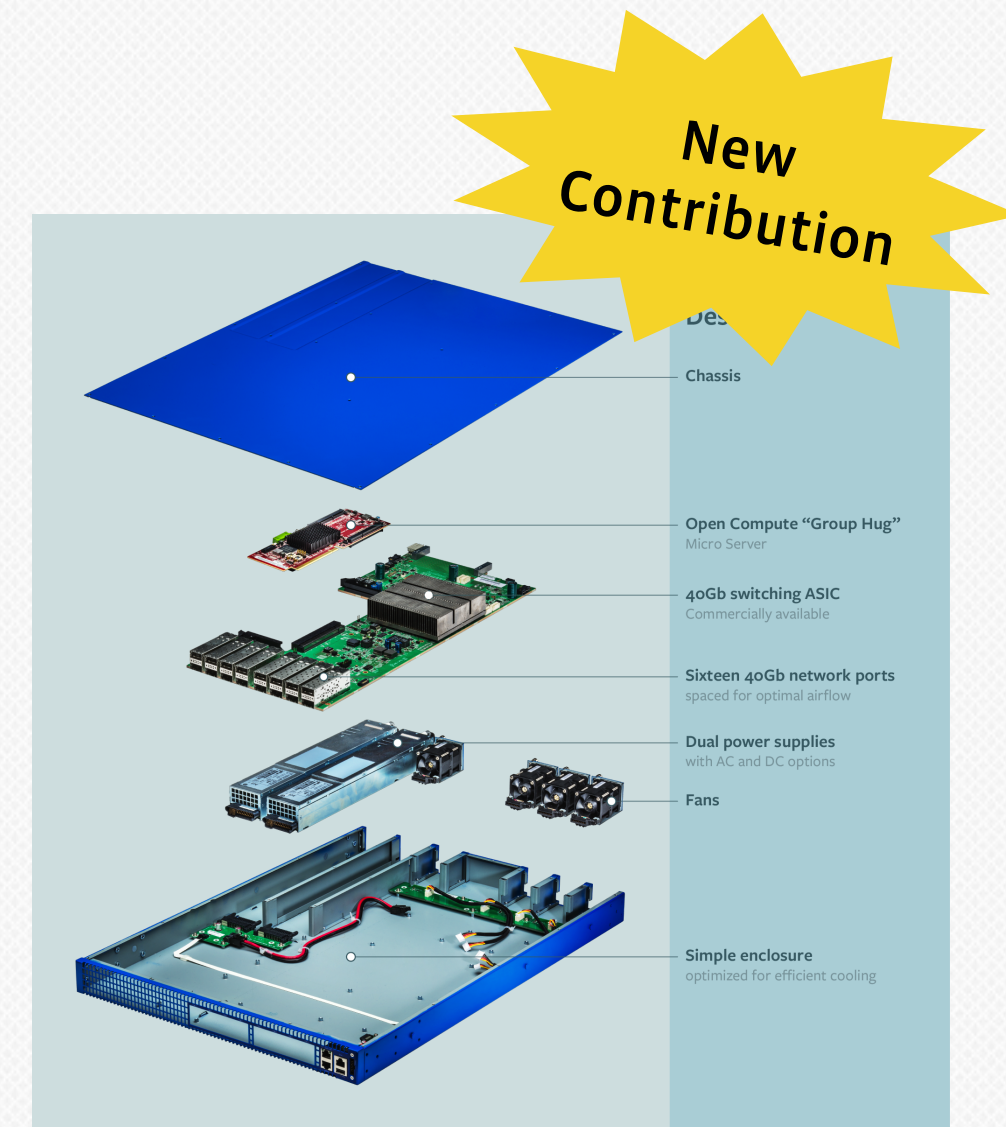

Facebook - “Wedge” switch

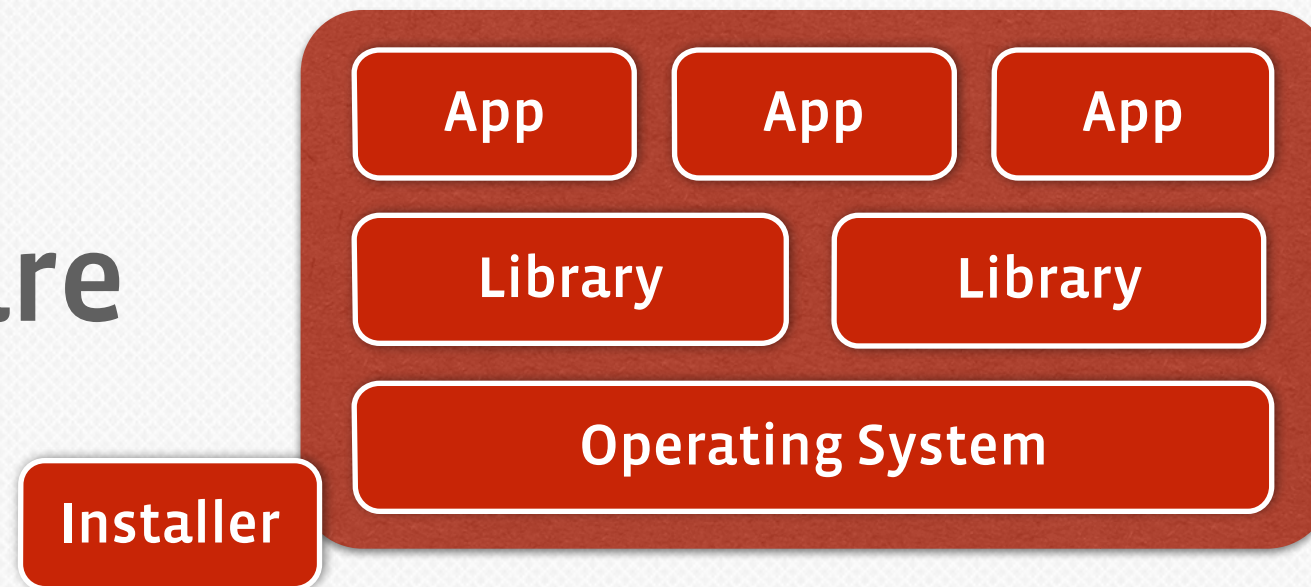

In production across FB data centers

- Has OCP Microserver and BMC
- Server-like mgmt and sw development
- Building block for FB switches

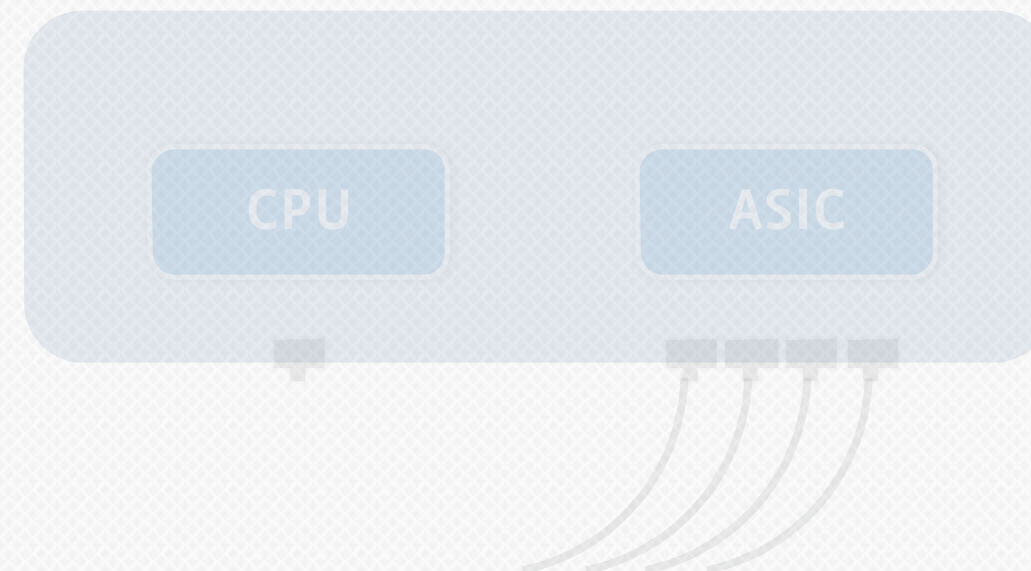

Accton

Software

Hardware

Interoperability

Integration

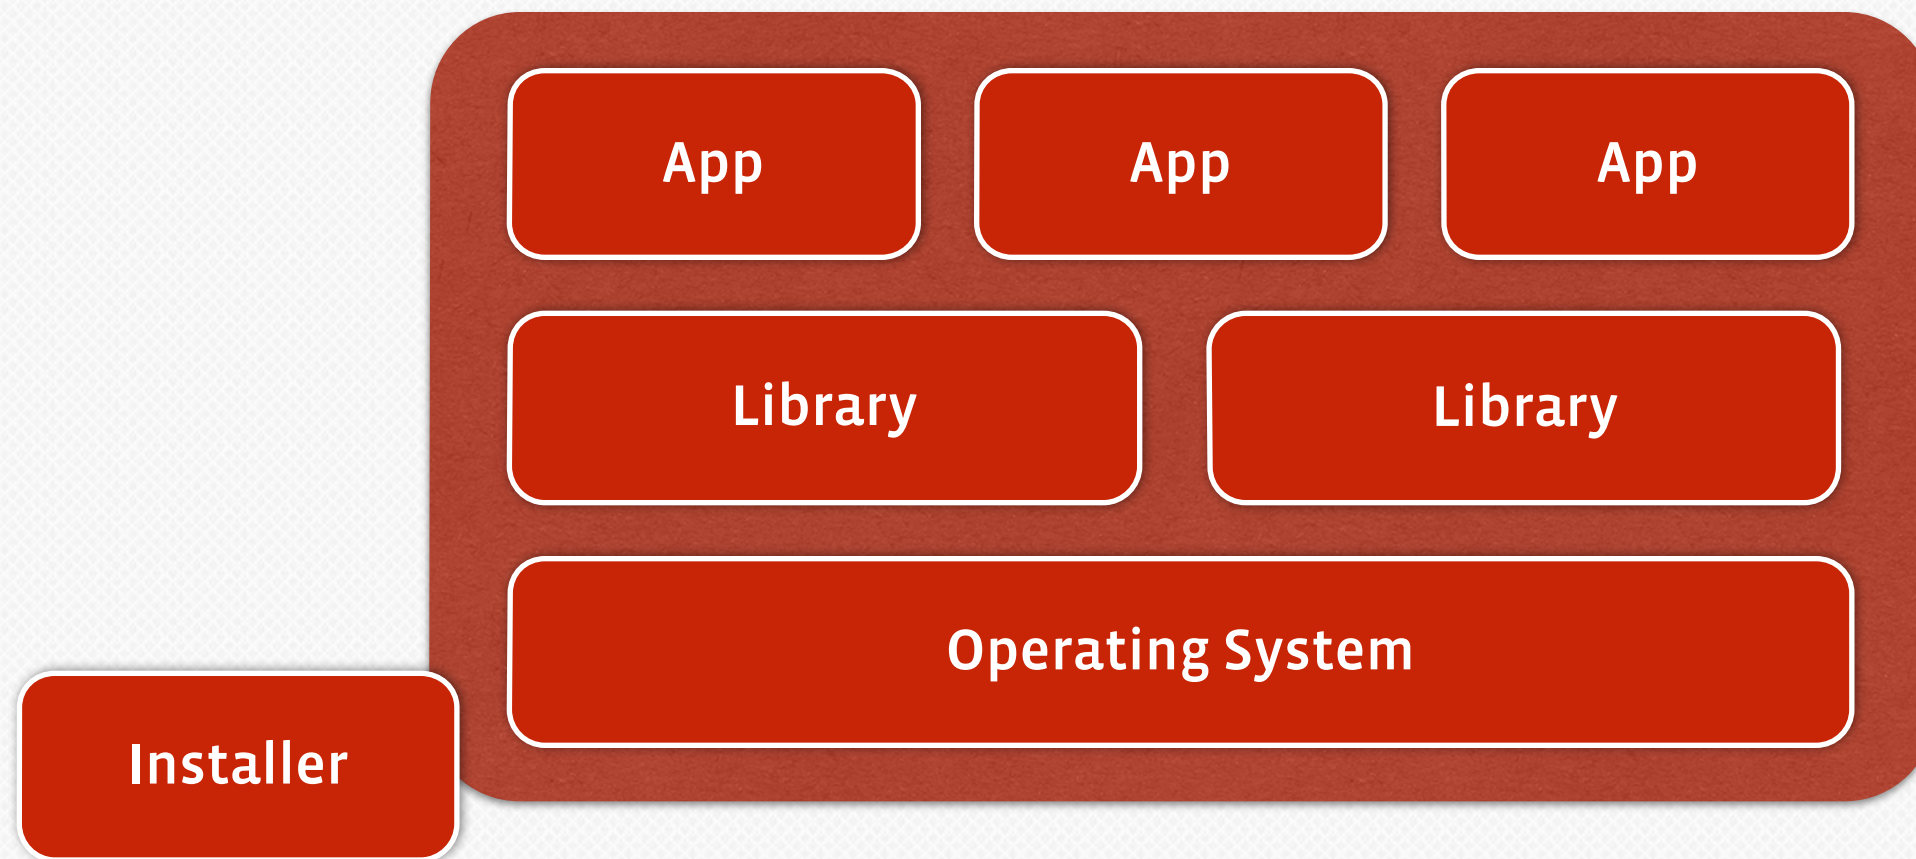

Validation

Testing

Active software projects

Providing building blocks

Open Network Install Environment (ONIE)

- Broadly used

Hardware Vendors

ALPHA

Edge core

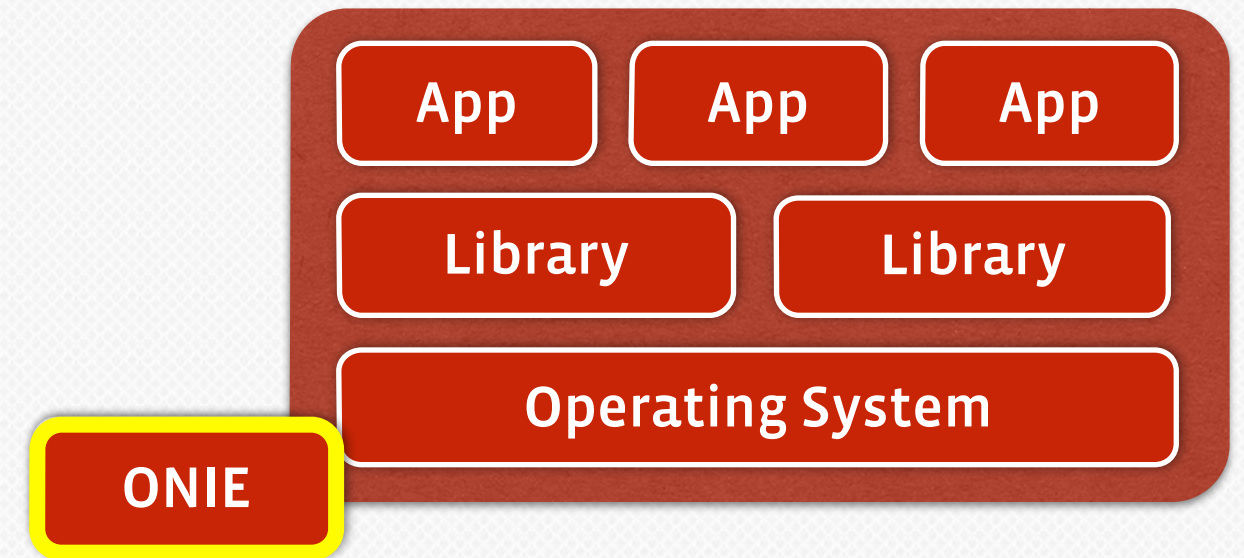

Interface Masters
TECHNOLOGIES

Quanta

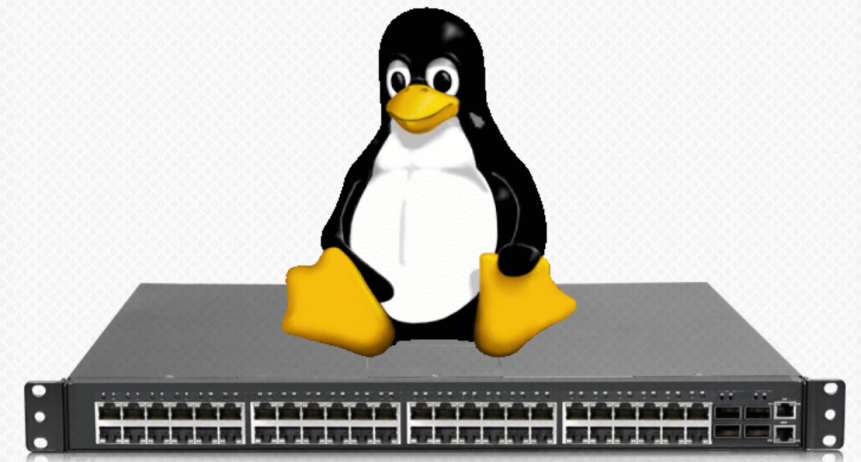

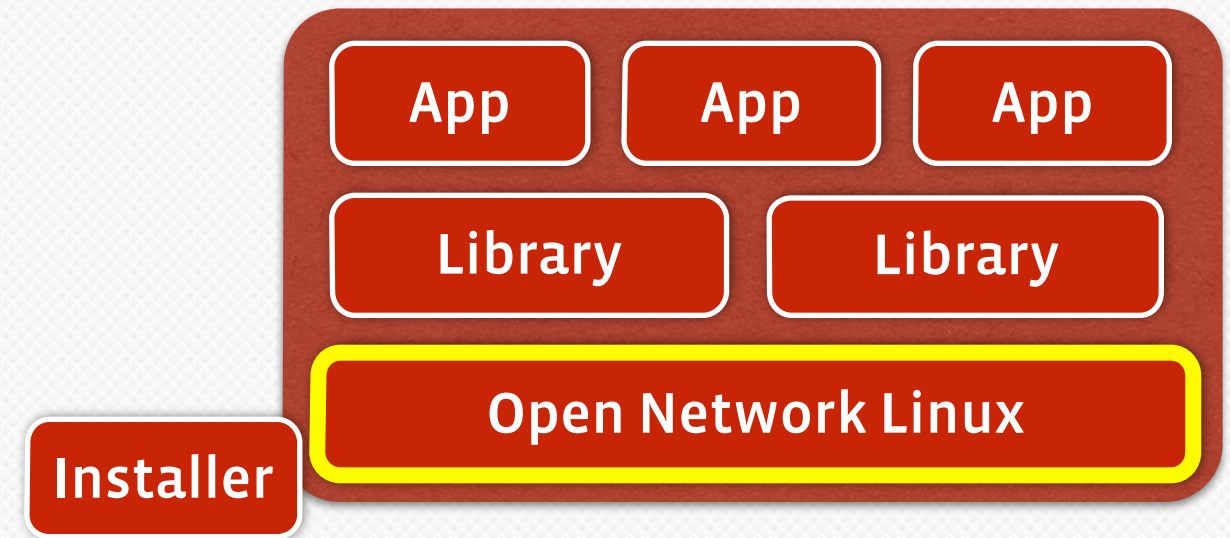

- Testing program with C & I
 - First batches of switches certified this quarter

Open Network Linux

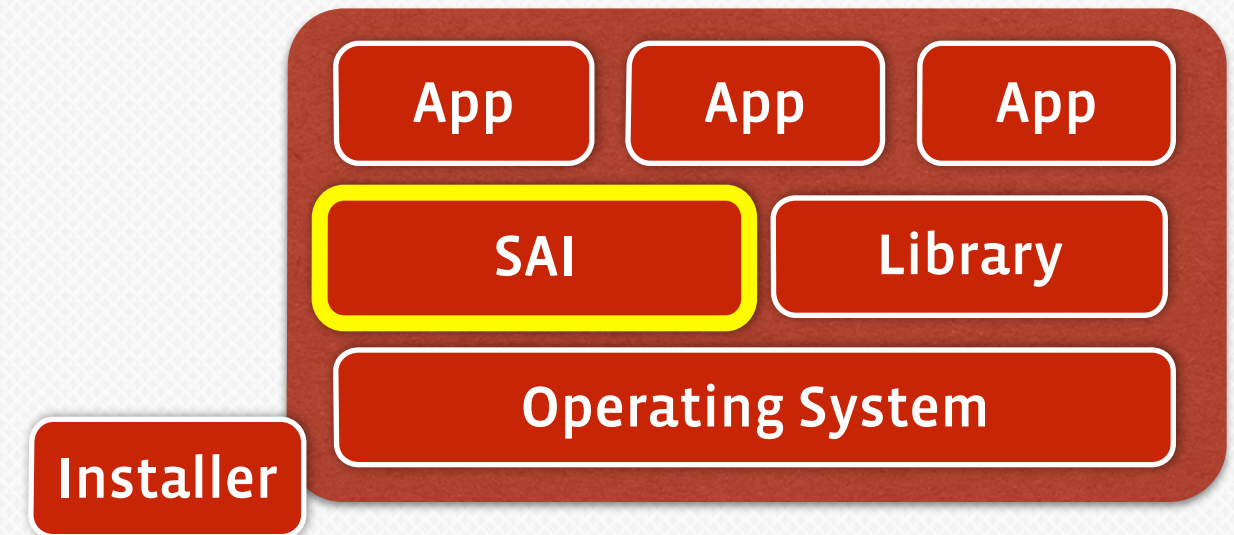

- Accepted Jan 2015
- Big Switch, Pica8, Accton, Quanta, DNI
- Basis for Network Operating System
- Takes care of platform “stuff”

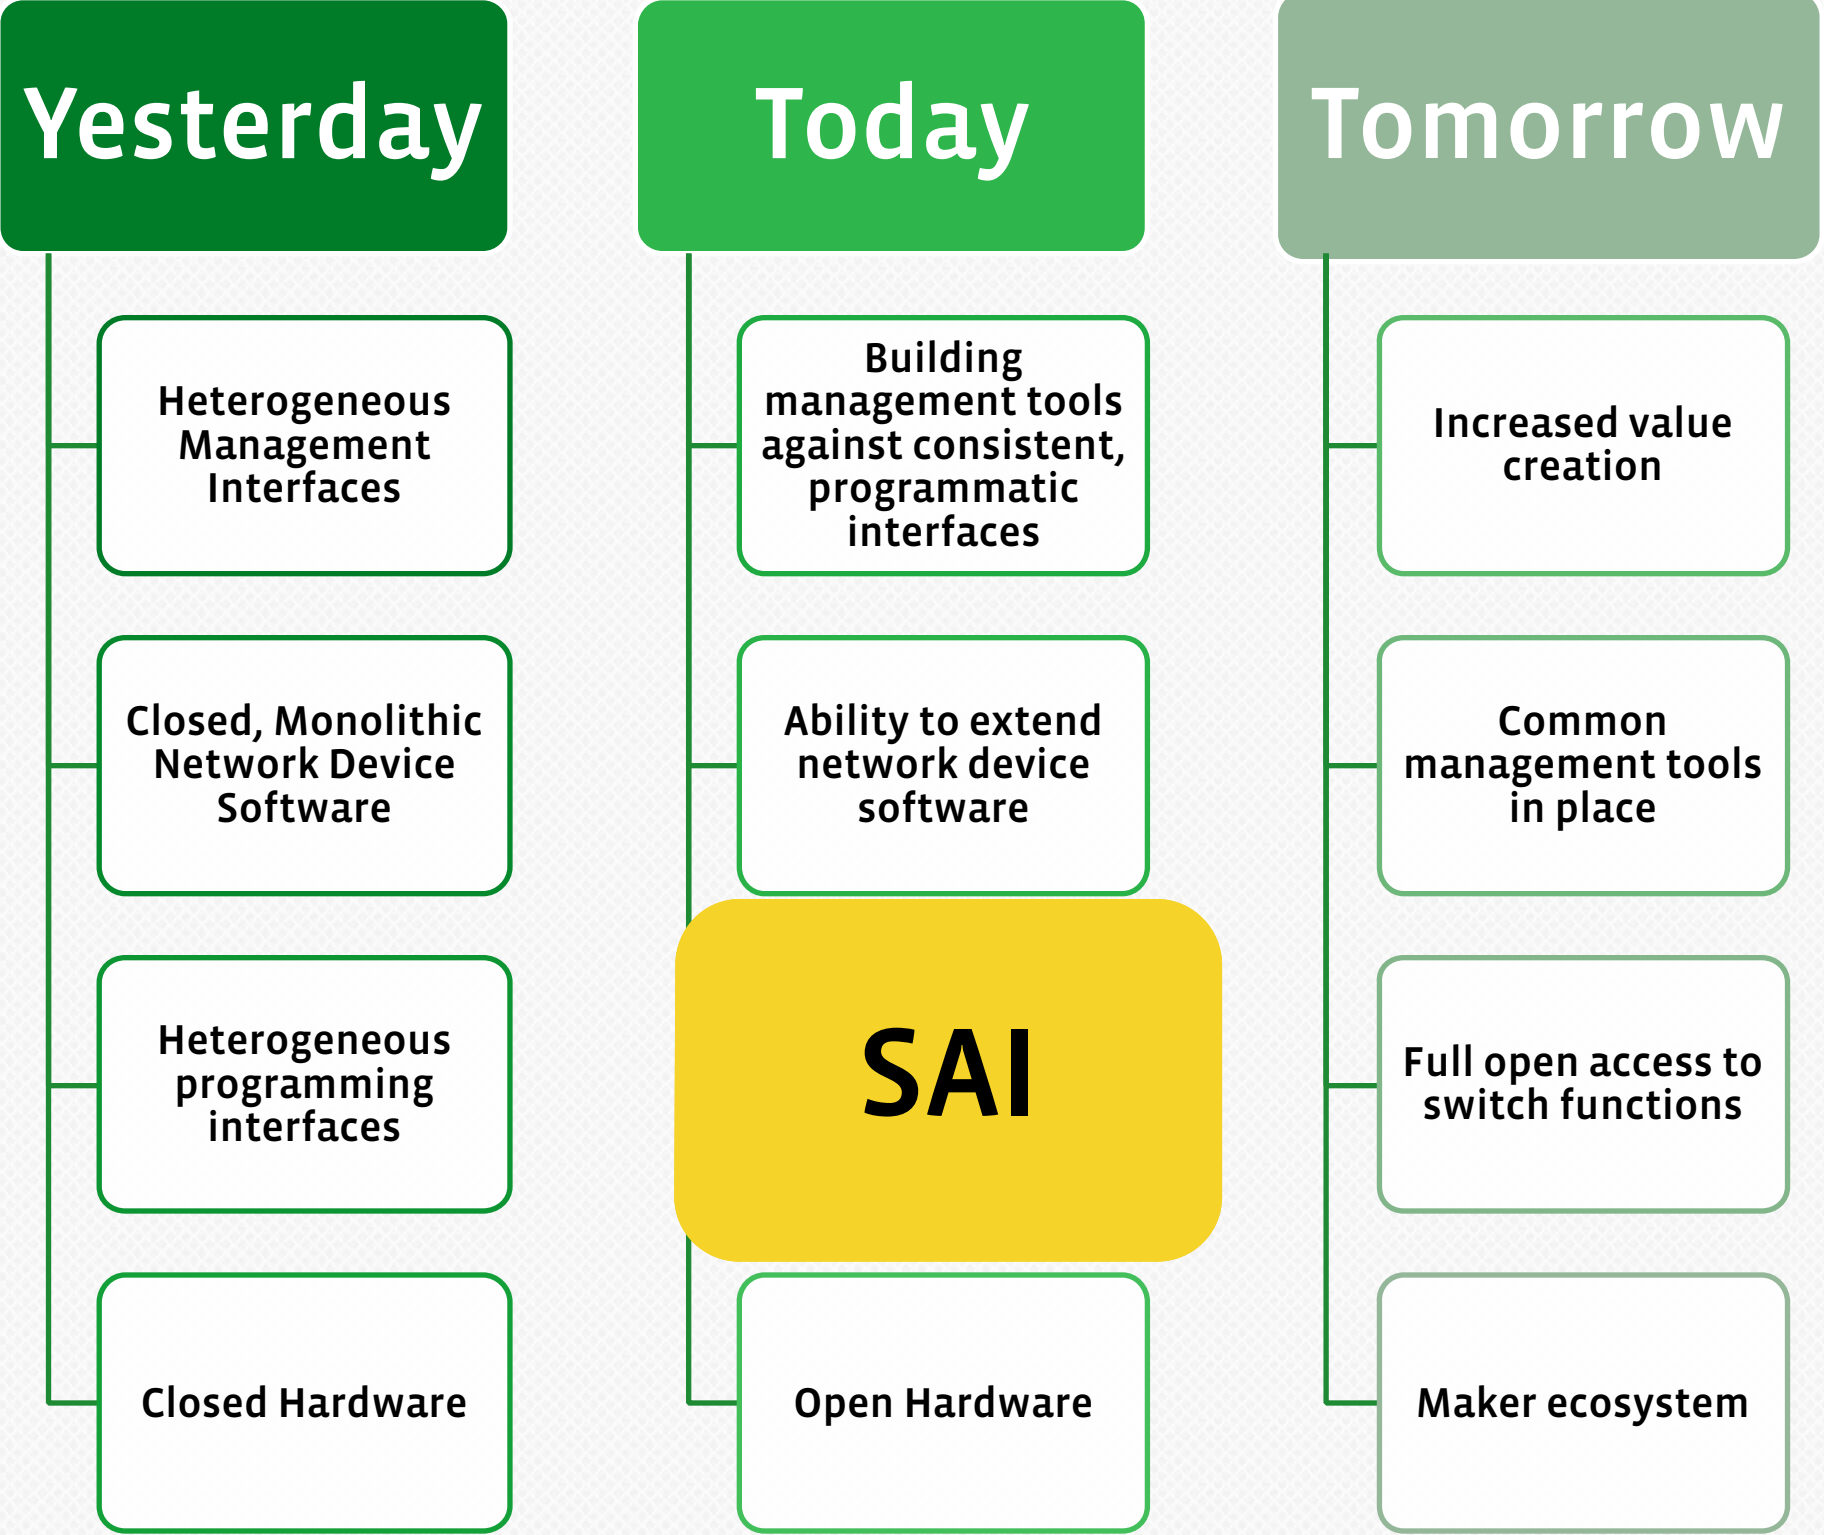

Switch Abstraction Interface (SAI)

Open, multi-company effort

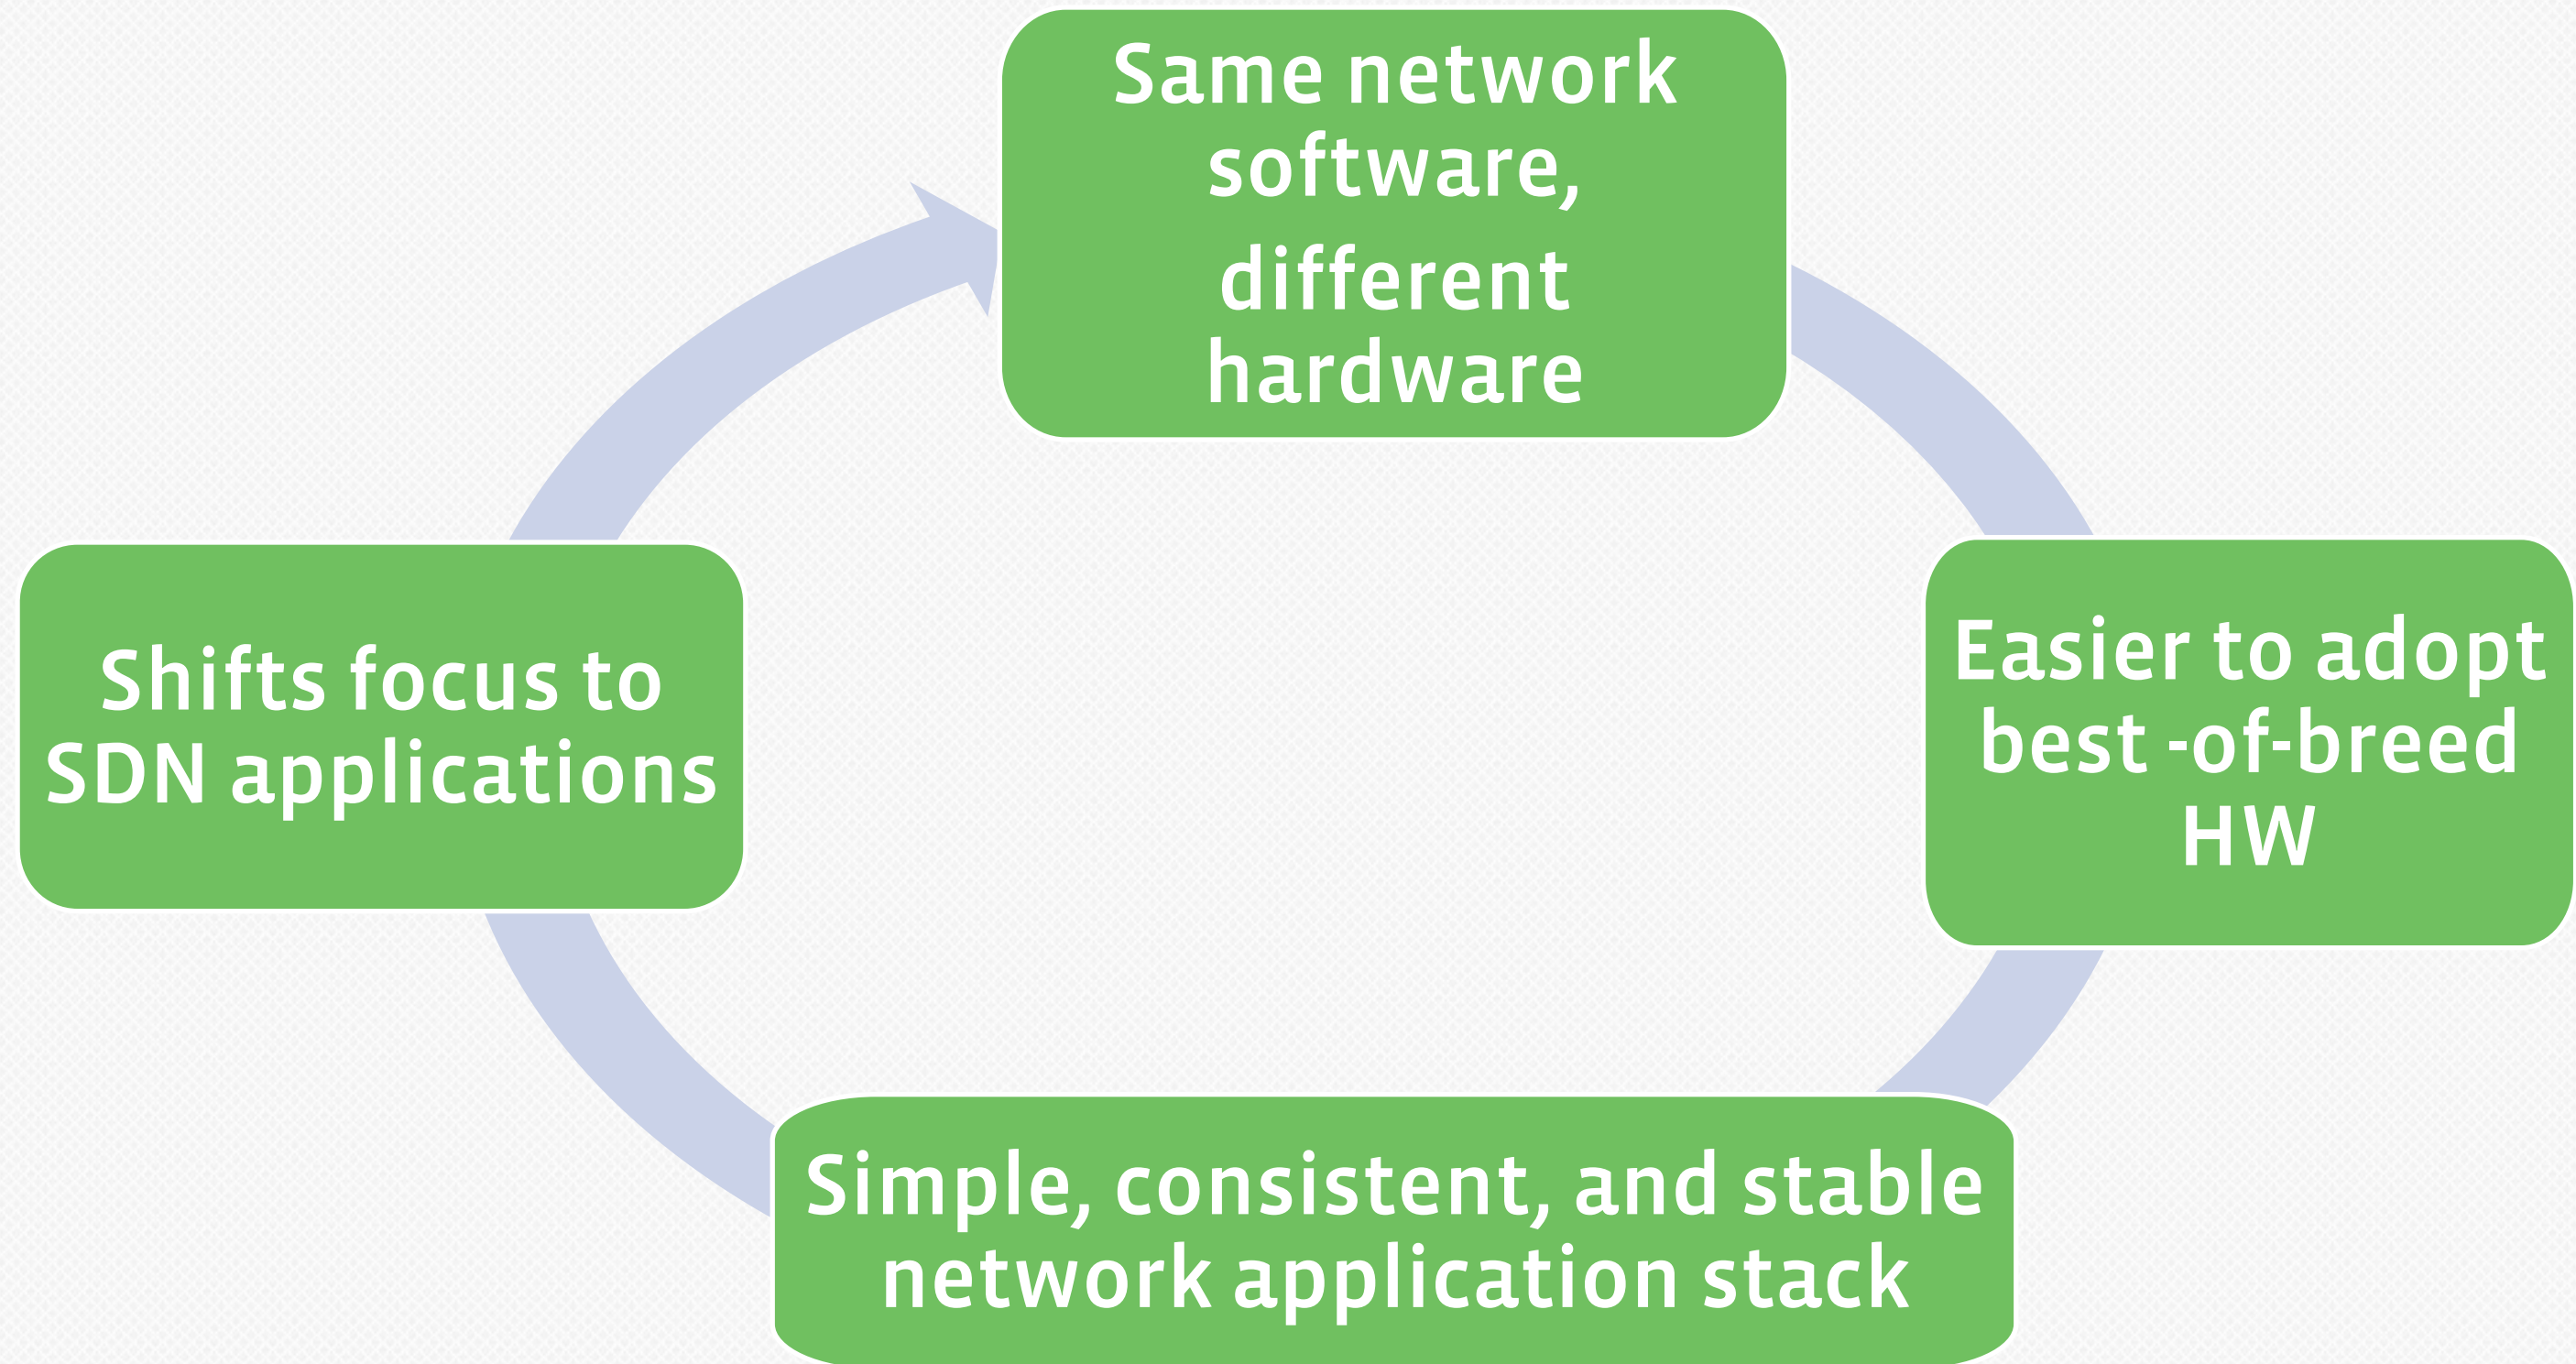

- An abstract interface above switch SDKs
- Very active open-source collaboration
- Multi-system demo, implementations

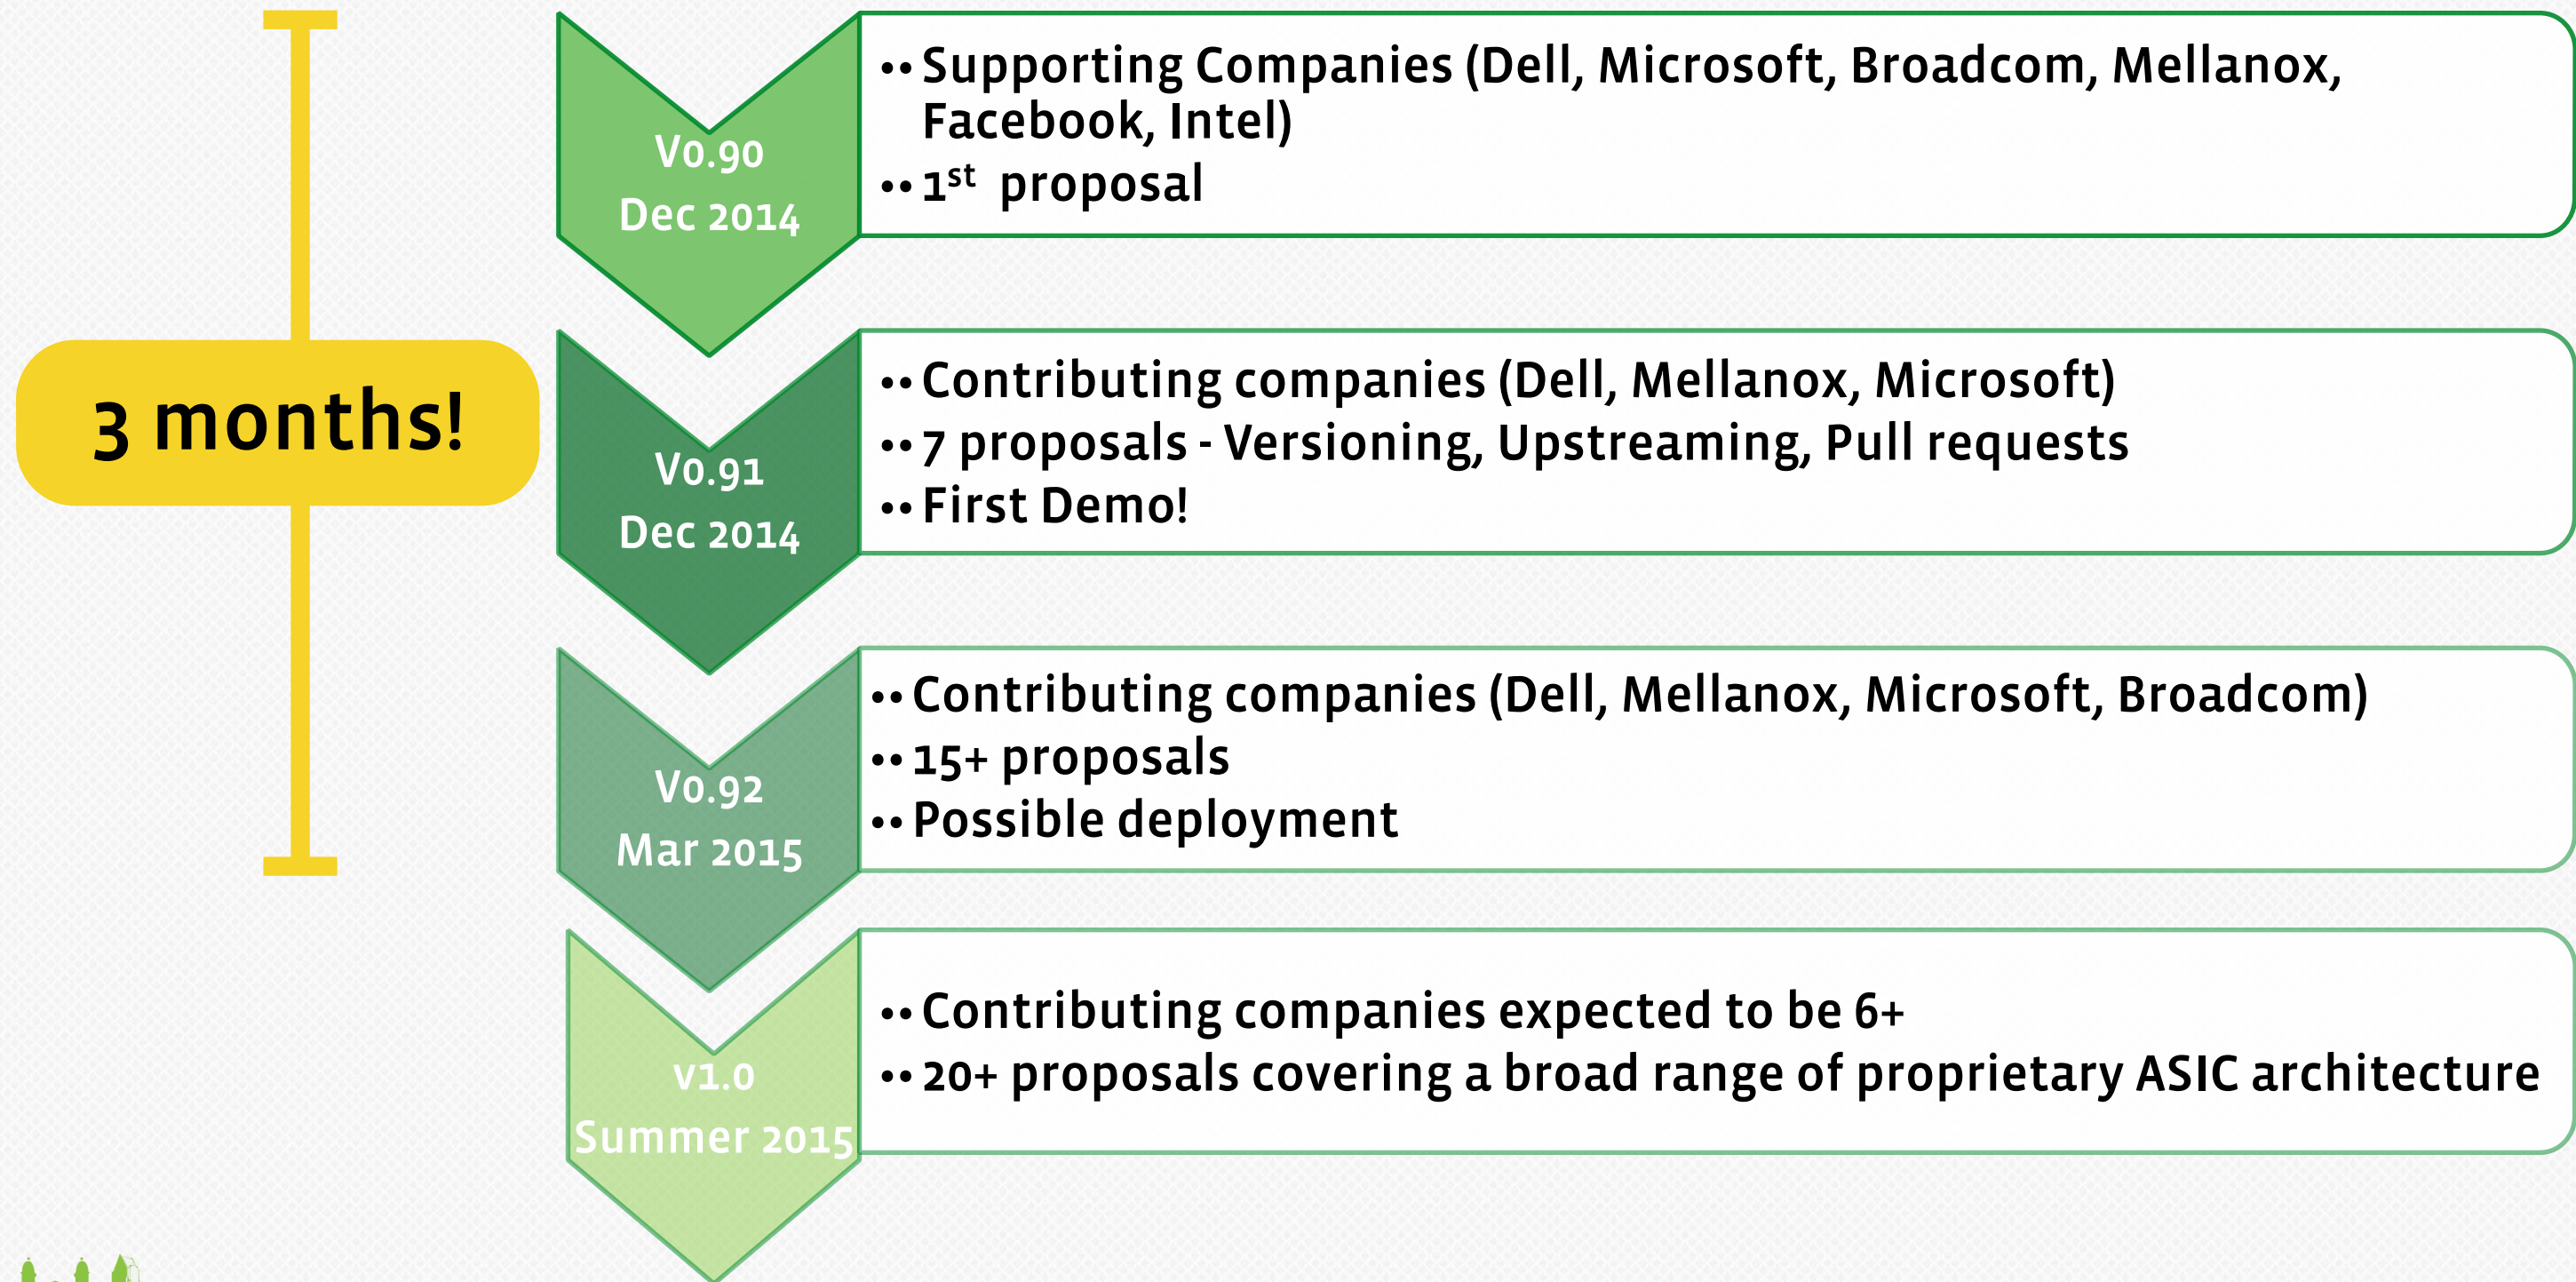

SAI Evolution

SAI Advantages for Microsoft (and others!)

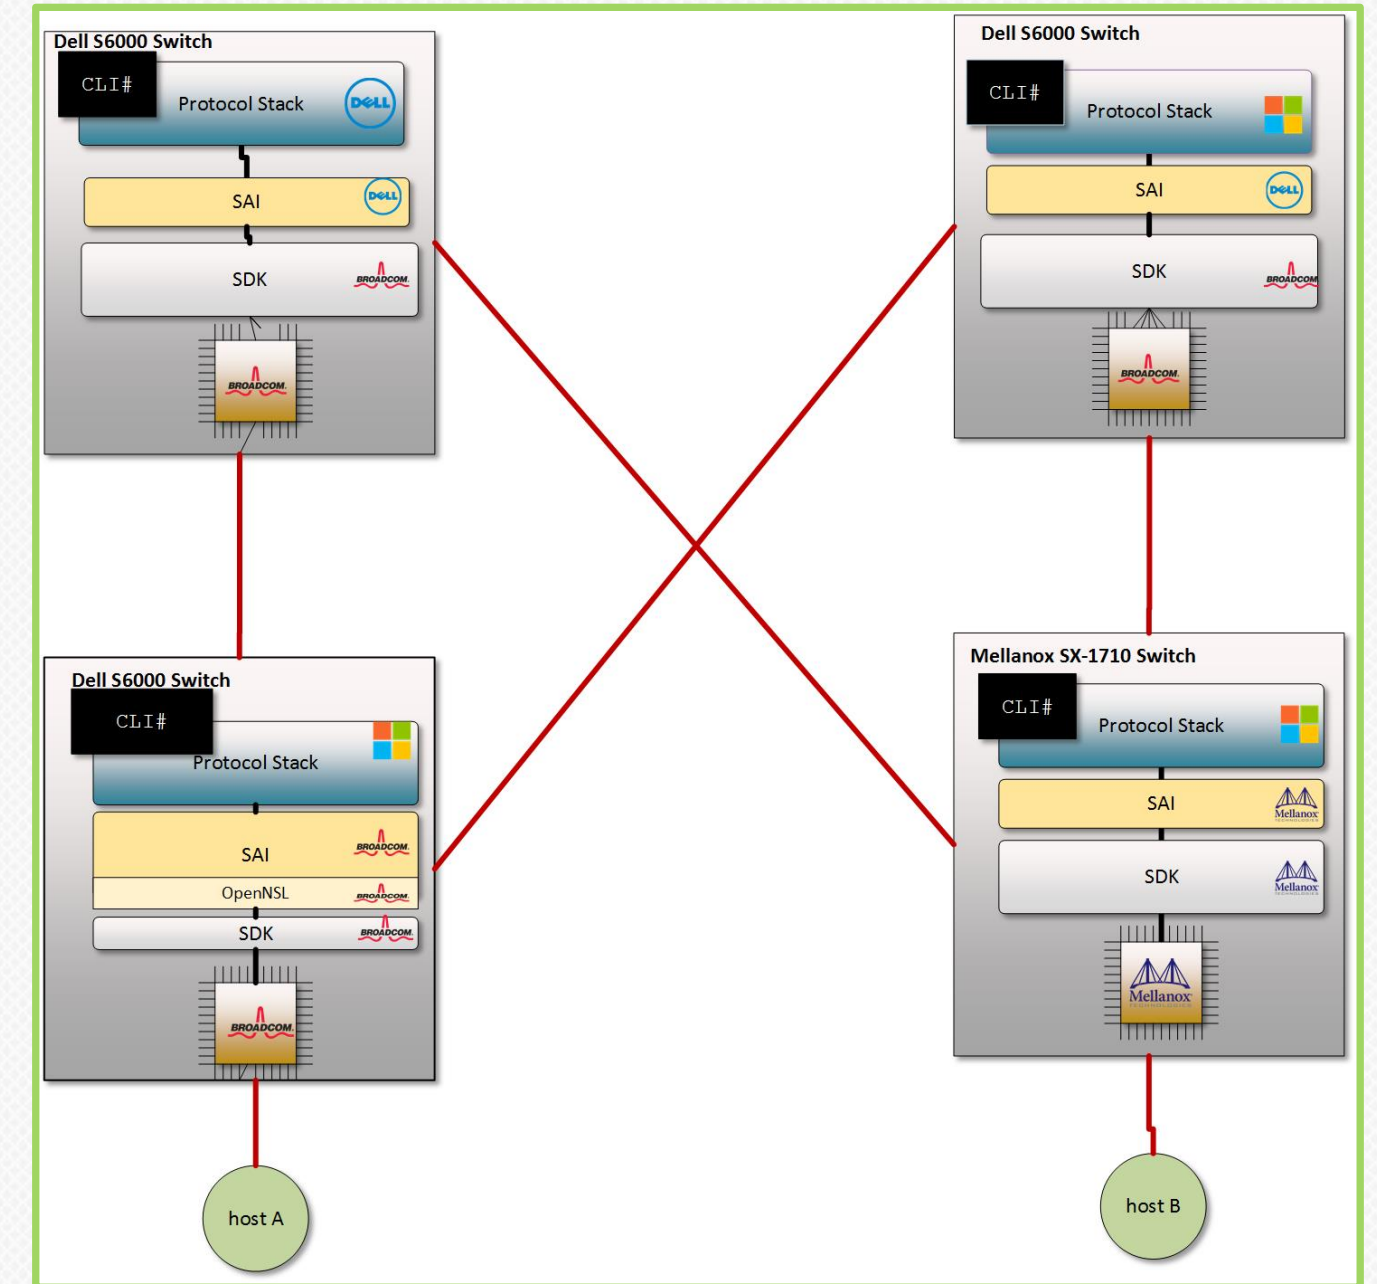

SAI Timeline

SAI Demo - Today, 4:45 PM, Networking Project

- By the numbers...
- 3 Vendors + 1 Operator
- 2 ASICs: Broadcom, Mellanox
- 2 OS stacks: Dell, Microsoft
- 2 HW systems: Dell, MLNX

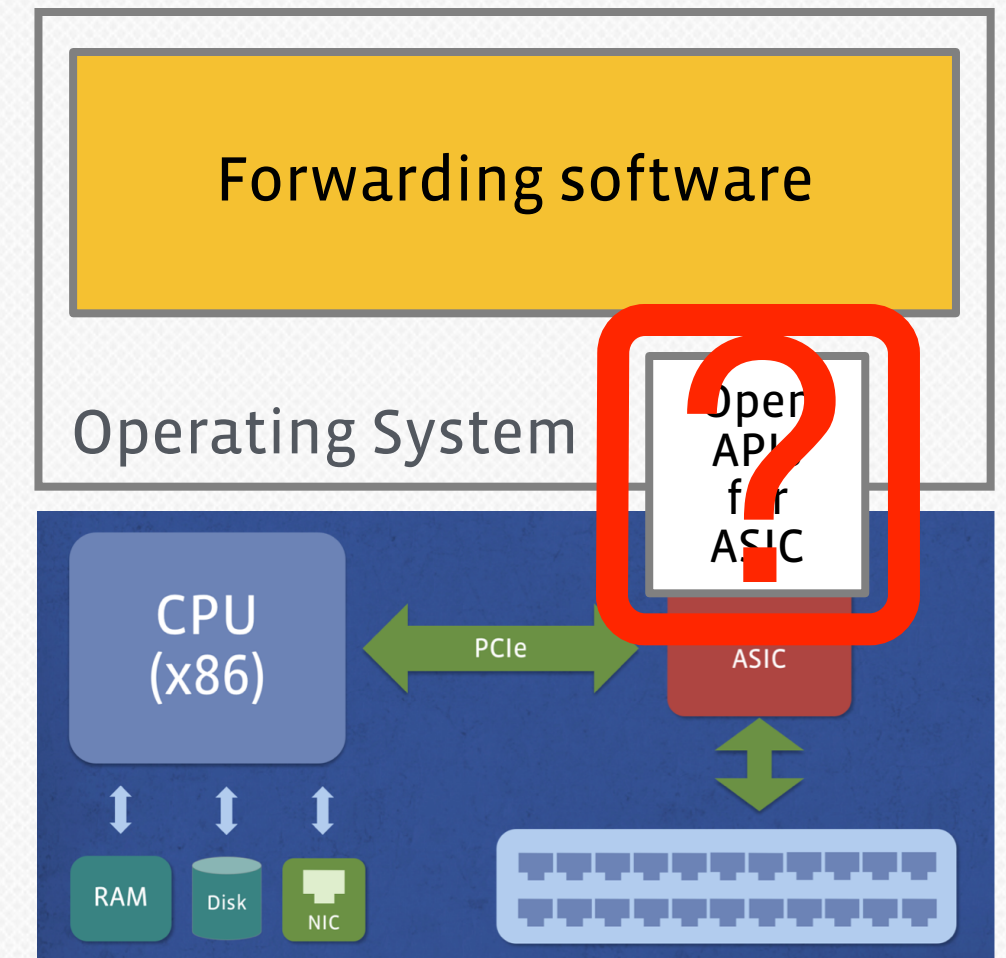

Broadcom - OpenNSL

Open Network Switch Library

New!

- Opening the APIs to the switch ASIC
- Enables open-source development
 - Network operating systems
 - Applications
- Enables OEMs to provide access

Installer

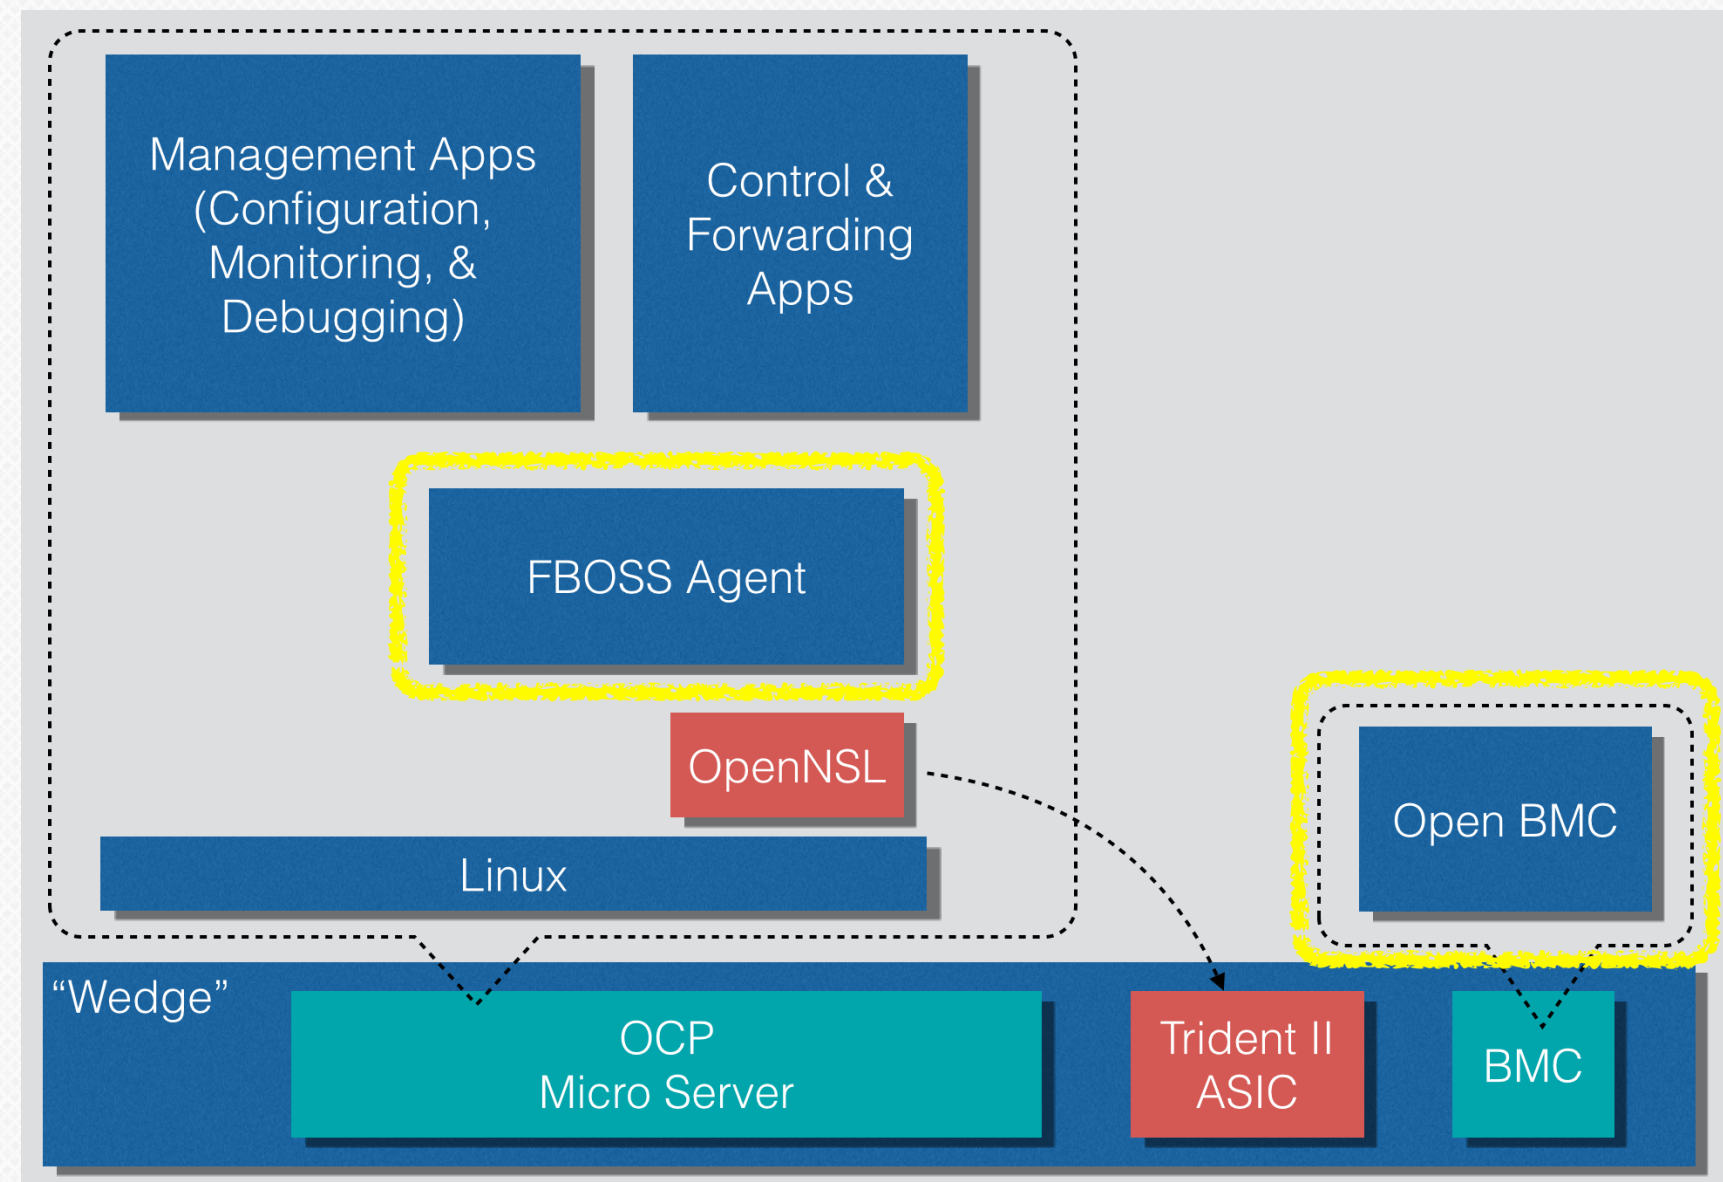

Facebook - FBOSS Agent & OpenBMC

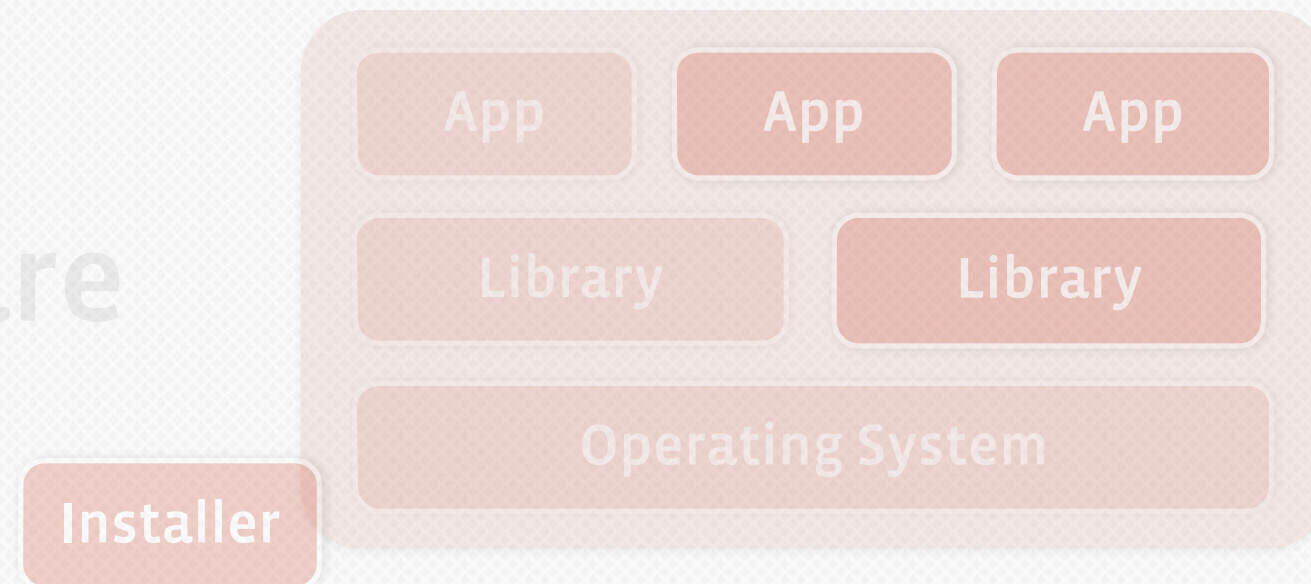

In production in FB data centers

New!

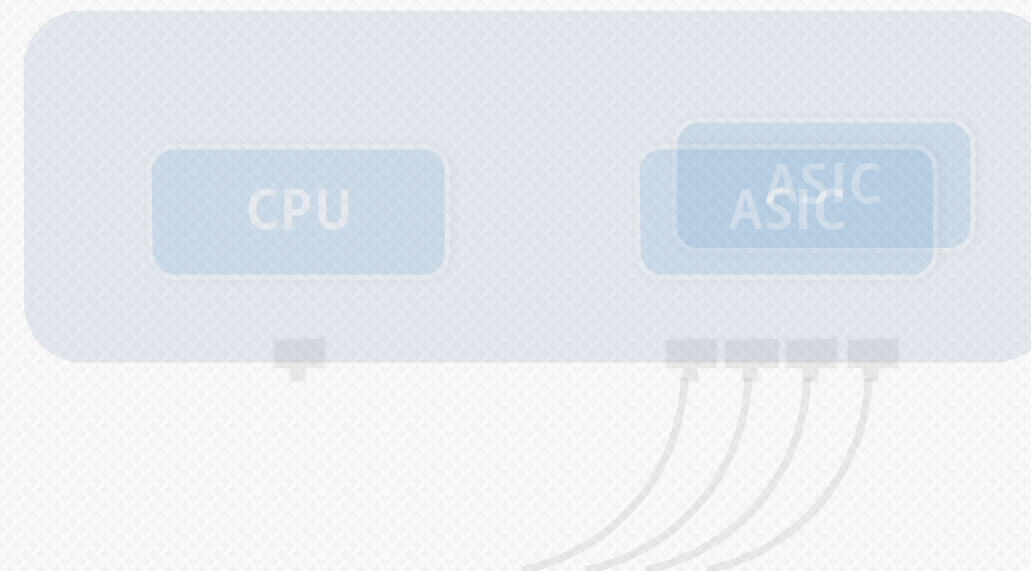

- FBOSS Agent
 - Core library to switch ASIC
 - Thrift interfaces
- OpenBMC
 - Low-level system management of board

Software

Hardware

Interoperability

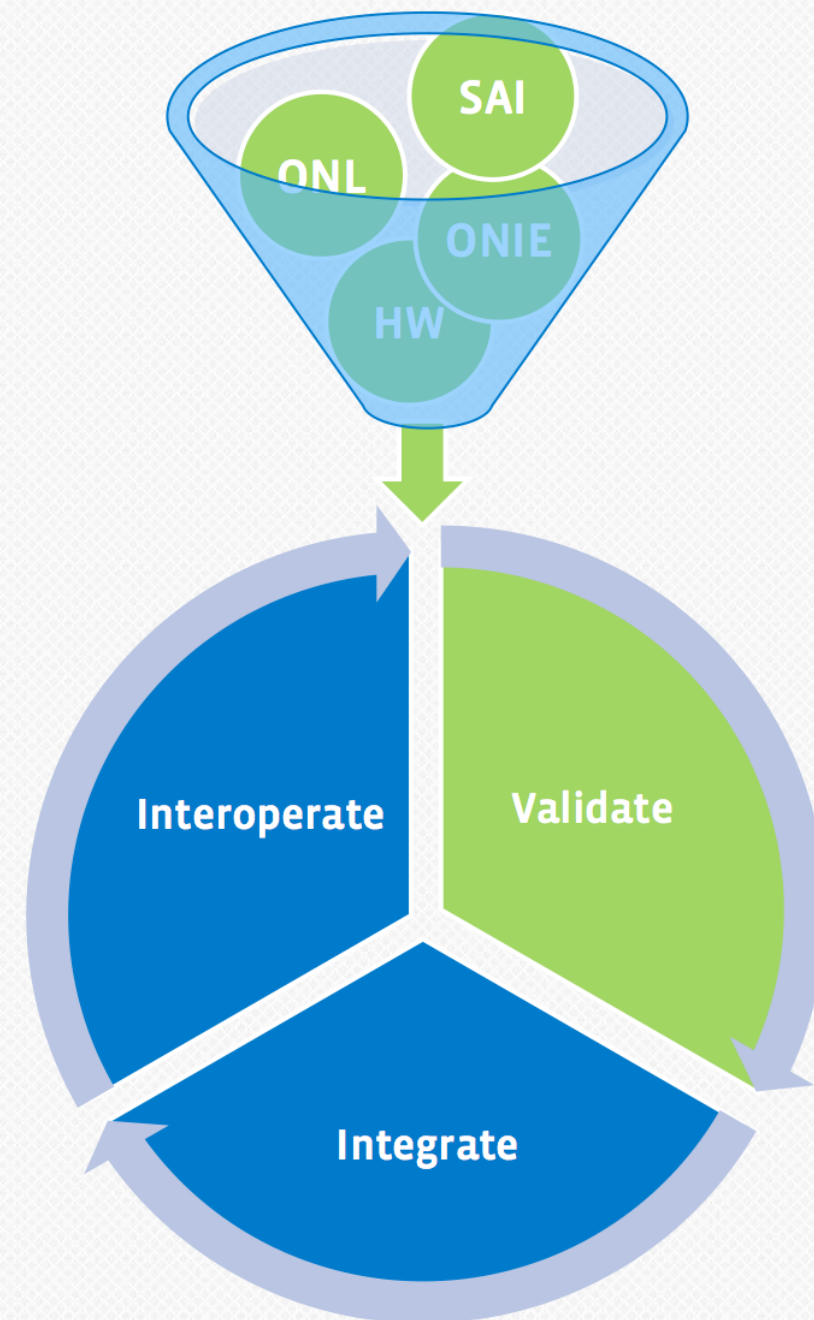

Integration

Validation

Testing

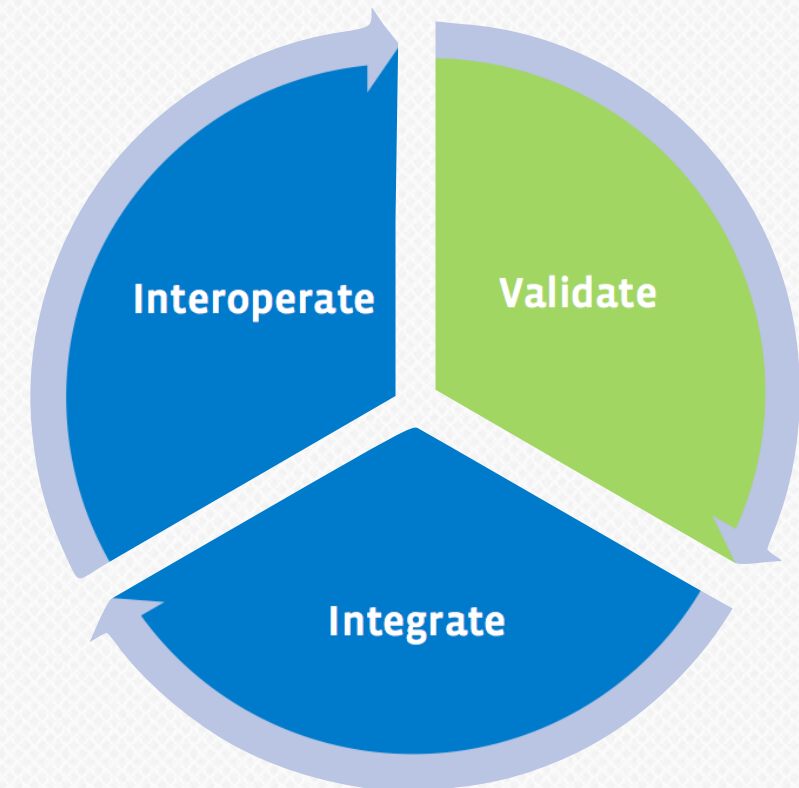

Validation, integration, and interoperability

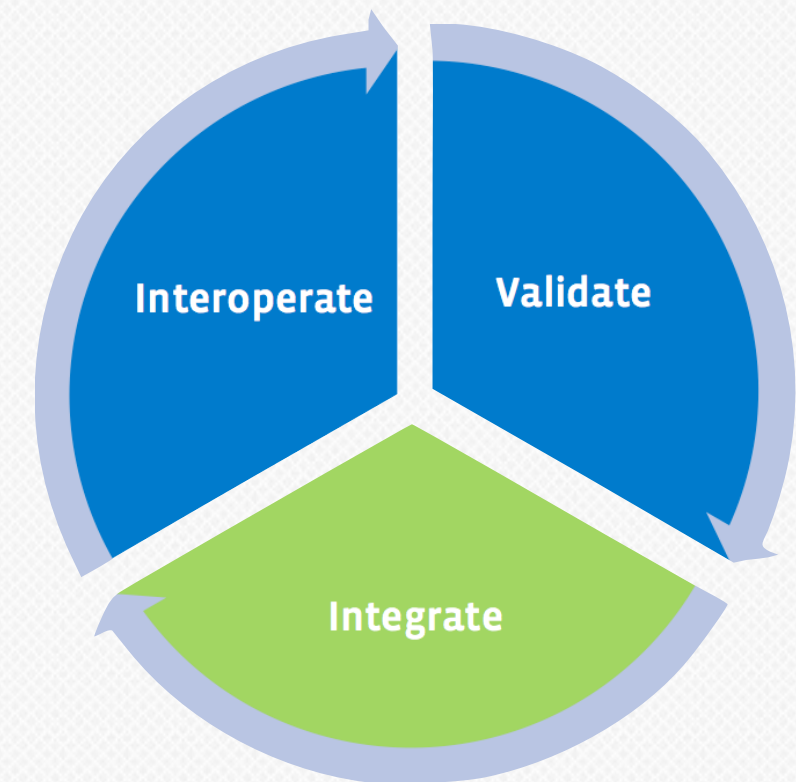

Validation of components

- Individual OCP components are validated
 - Switch
 - ONIE
 - ONL
 - SAI
 - APD
- OCP components are combined and validated
 - Switch with ONIE, ONL, SAI, APD, ...
- Successful validation earns OCP seal or certificate

Integration of non-OCP components

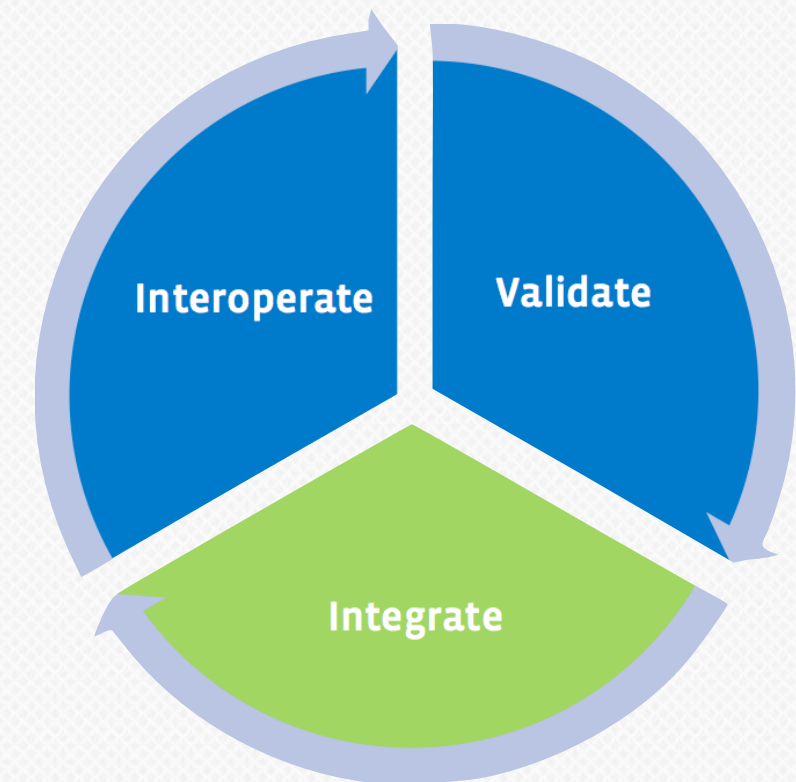

- Include network operating systems (NOS)
 - Cumulus Linux
 - Switch Light
 - PicOS
 - Other systems
- Include FRUs
 - XCVRS, AOC, DAC
- Include “other” technologies
 - NPUs, ...

Integration of non-OCP components

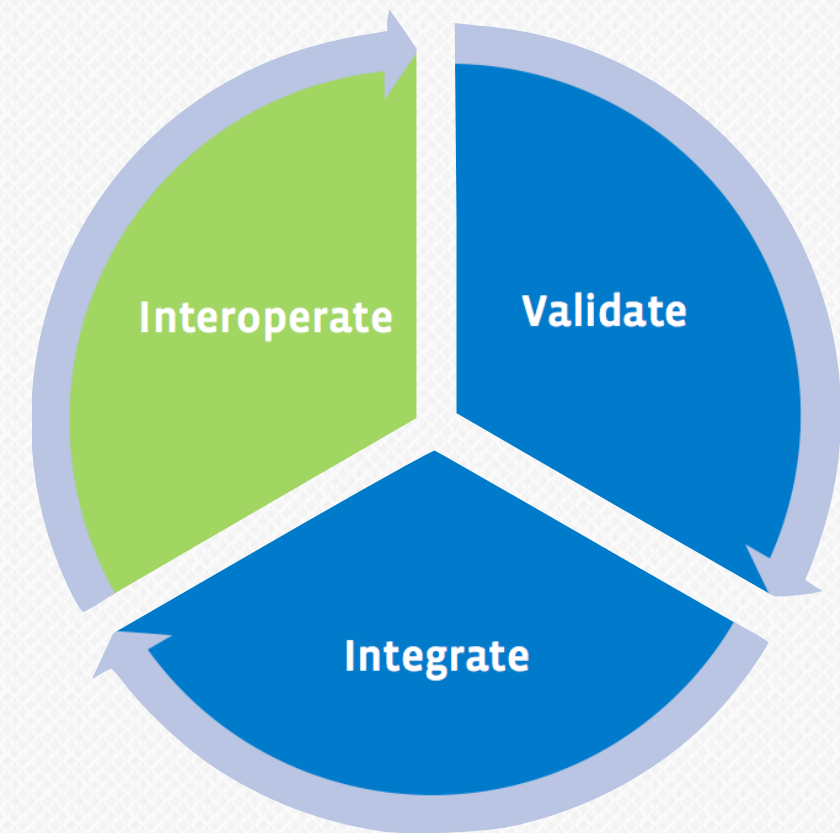

Open Networking Interoperability Testing

- Week of 2015 Feb 23 at UNH - IOL
- 6 vendors
 - Accton
 - Amphenol
 - Avago
 - Big Switch Networks
 - Cumulus Networks
 - Finisar

Interoperability with industry

- With traditional network equipment & protocols
 - Traditional vendor interoperability testing
 - Cisco, Juniper, Arista
 - OSPF, BGP, etc...
- With “new” network equipment & protocols

The background of the slide is a solid green color. It is decorated with a pattern of numerous light green arrows. These arrows are scattered across the left and bottom-left portions of the slide, pointing in various directions such as up, down, left, right, and diagonally. The density of the arrows is higher on the left side and fades out towards the right.

What's next?

Continue innovation, drive adoption

Software

An open SW ecosystem
A complete open-source
stack?

Test plans &
software

Seals &
certifications

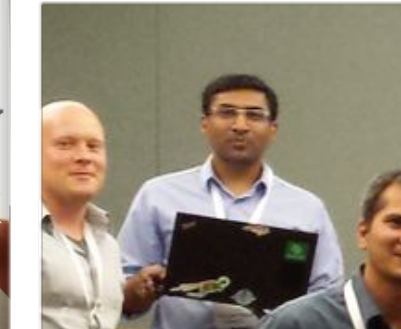

Testing

Solutions for
specific use
cases?

Hardware

Beyond TOR
100G+ optics?
