Application Notice

1. **Delta will not guarantee the performance of the products if the application condition falls outside the parameters set forth in the specification.**
2. **A written request should be submitted to Delta prior to approval if deviation from this specification is required.**
3. **Please exercise caution when handling fans. Damage may be caused when pressure is applied to the impeller, if the fans are handled by the lead wires, or if the fan was hard-dropped to the production floor.**
4. **Except as pertains to some special designs, there is no guarantee that the products will be free from any such safety problems or failures as caused by the introduction of powder, droplets of water or encroachment of insect into the hub.**
5. **The above-mentioned conditions are representative of some unique examples and viewed as the first point of reference prior to all other information.**
6. **It is very important to establish the correct polarity before connecting the fan to the power source. Positive (+) and Negative (-). Damage may be caused to the fans if connection is with reverse polarity, if there is no foolproof method to protect against such error specifically mentioned in this spec.**
7. **Delta fans without special protection are not suitable where any corrosive fluids are introduced to their environment.**
8. **Please ensure all fans are stored according to the storage temperature limits specified. Do not store fans in a high humidity environment. We highly recommend performance testing is conducted before shipping, if the fans have been stored over 6 months.**
9. **Not all fans are provided with the Lock Rotor Protection feature. If you impair the rotation of the impeller for the fans that do not have this function, the performance of those fans will lead to failure.**
10. **Please be cautious when mounting the fan. Incorrect mounting of fans may cause excess resonance, vibration and subsequent noise.**
11. **It is important to consider safety when testing the fans. A suitable fan guard should be fitted to the fan to guard against any potential for personal injury.**
12. **Except where specifically stated, all tests are carried out at room (ambient) temperature and relative humidity conditions of 25°C, 65% RH. The test value is only for fan performance itself.**
13. **Be certain to connect an " 4.7μF or greater" capacitor to the fan externally when the application calls for using multiple fans in parallel, to avoid any unstable power.**

COMPONENT - FANS, ELECTRIC

Delta Electronics Inc.
Taoyuan Hsien, Taiwan

DESCRIPTION

PRODUCT COVERED:

USR, CNR Component – DC Fans, Models see "ELECTRICAL RATINGS" for details.

USR indicates investigation to the Standard for Electric Fans, UL 507.

CNR indicates investigation to the Canadian Standard for Fans and Ventilators, CSA C22.2 No. 113-M1984 & T.I.L. (Technical Information Letter) No. G-37C.

ELECTRICAL RATINGS:

Model No(s).	V dc	A
GFC0612DS(Y)	12	1.92

Note: Above (Y) may be xxxxx, where x may be A through Z, 0 through 9, "-" or blank.

TECHNICAL CONSIDERATIONS (NOT FOR FIELD REPRESENTATIVE'S USE):

These fan described in this report are provided with a solid state control circuitry that incorporates a current limiting, current shutdown circuit for locked rotor conditions.

Conditions of Acceptability -

For use only in products where the acceptability of the combination is determined by Underwriters Laboratories Inc.

The following items are limitations to be considered during the end-use investigation:

1. This investigation was established to cover a Class A insulating system for all fans described in this Report.

2. The suitability of these fans when operating under normal or abnormal conditions, within an appliance or enclosure, shall be determined for each application.

3. The suitability of these fans for use when exposed to water, oil, freon, chemicals, X-rays, ultraviolet rays, and the like, has not been determined by this investigation.

4. The suitability of the leads shall be determined for each application with regard to size, temperature limitations, and any other elements that might be required in the end-use product.

5. The thermoplastic enclosure of these fans have not been subjected to the Mold Stress Distortion and Ball Impact (5 ft-lbs) Tests as described in Standard UL 746C during this investigation.

6. The solid state control circuitry provided with these fan were subjected to an Abnormal Operation Locked Rotor Test. If coil temperatures exceeded Normal Temperature Test limits, the locked rotor test was continued for 18 days in accordance with UL 2111, Standard for Overheating Protection for Motors. Suitability of the motors locked rotor protection shall be determined in the end-product investigation.

7. These fans have not been evaluated for use with solid state speed control devices. Suitability for such usage shall be evaluated in the end-use product.

8. The Temperature Test conducted on these fans described in this Report was done in an average ambient temperature of 25°C. The suitability of these fans when they are intended to operate in a higher ambient temperature shall be evaluated during the end-use investigation.

9. These fans shall be mounted and enclosed in accordance with the frames and enclosure requirements of end product. Suitable enclosures or guards shall be provided for these fan blades to reduce the risk of injury to persons. These fans may be provided with a finger guard. Suitability of the finger guard shall be determined in the end-use investigation.

10. The minimum flammability rating of the plastic used for these fans frames and impellers of these fans described in this Report is V-0.

11. The minimum flammability rating of the bobbin of these fans described in this Report is V-0 (at min. 1.6 mm thick).

12. These fans described in this Report have not been evaluated to the requirements for over-surface and through-air spacings described in Section 24 of the Standard for Electric Fans, UL 507. These spacings have been waived on the basis that these fans will be connected to an isolated secondary circuit rated maximum 30 V rms (42.2 V peak) or 60 V dc and are subjected to a 500 V dielectric strength test.

13. The minimum flammability rating of the printed wiring boards used in these fans described in this Report is V-0.

14. These fans described in this report may be mounted to an external heatsink, mounting bracket, chassis, shroud, or the like. The above mounted parts have not been evaluated with these fans. Suitability of the above parts shall be evaluated in combination with these fans during the end-product investigation and described in the end-product report.

15. Models GFC0612DS(Y) are provided with an external lead that is intended for connection to an external speed control (PWM) circuit. This lead was not connected during the component fan investigation.

16. The suitability of the lead terminations and connectors shall be determined during the end-product investigation.

17. Wiring leads are tack soldered to the printed wiring board. Suitability of the lead securement and routing shall be evaluated in the end-product.
