Scope

This document outlines the technical specifications for the Nephos NPS4806 Open Switch Platform submitted to the Open Compute Foundation.

Overview

This document describes the technical specifications of the NPS4806 Top of Rack switch designed by Nephos Inc. The NPS4806 is a cost optimized switch design focused on Top of Rack deployments which support 10Gb server connectivity and providing 40Gb uplinks to the distribution/Spine layer of the network. The switch supports forty eight SFP+ ports that each operate at 1Gb or 10Gb and six QSFP+ ports that operate at 40Gb each or can be broken out into four 10Gb (or 1Gb) ports each.

The NPS4806 is a PHY-Less design with the SFP+ and QSFP+ connections directly attaching to the Serdes interfaces of the Nephos MT3258 720G Aries switching silicon providing the lowest cost, latency, and power. NPS4806 supports traditional features found in Top of Rack switches such as:

- Redundant field replaceable power supply and fan units
- Support for “Front to Back” or “Back to Front” air flow direction
- Supports a modular CPU card that allows flexibility in the CPU and/or memory configurations that can be offered.
- The NPS4806 is a 1RU design that supports standard 19” rack deployments as well as standard 21” Open Rack deployments.
